REPORT

TO

HIS EXCELLENCY JOHN CAMPBELL, EARL OF ABERDEEN, K.T.

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

Your Excellency, I now have the honour of submitting the Forty-third Annual Report on Marriages, Births, and Deaths in Ireland.

GENERAL SUMMARY.

The number of Marriages registered in Ireland during the year 1906, was 22,662; the number of Births, 103,536; and the number of Deaths, 74,427. The marriage-rate was 5·16 per 1,000 of the estimated population, showing a decrease of 0·10 as compared with that for the year 1905, but is 0·08 above the average rate for the ten years 1896-1905; the birth-rate was 23·6 per 1,000 of the estimated population, showing an increase of 0·2 as compared with that for the preceding year, and is 0·4 above the average rate for the ten years 1896-1905; and the death rate (17·0 per 1,000) is 0·1 under the rate for the preceding year, and 0·9 under the average rate for the ten years 1896-1905.

It may be seen from the returns that the natural increase of population, or excess of births over deaths, was 29,109; the loss by emigration amounted to 35,344; it would appear, therefore, that there was a decrease of 6,235 in the population during the year, but against this decrease there is a set-off in immigration, of which there is no official record. The estimated population in the middle of the year was 4,388,006.

TABLE I.—Showing for each of the years 1896-1906 the estimated **Population**; the number of **Marriages**, **Births**, and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1896-1905.

YEARS	*Estimated Population in the middle of each year	Numbers *Registered*			Number of Emigrants as returned by the Enumerators	Rate per 1,000 of Estimated Population			
		Marriages	Births	Deaths		Marriages	Births	Deaths	Emigrants

Offences against the Acts administered by this Department reported during the financial year ended 31st March last, numhered 483. On careful inquiry into the circumstances, prosecutions were ordered to he instituted in 29 caeee. In 20 of these the partiee were convicted and punished; and in 8 the proceedings were ahandoned, the parties (in most instances) paying the costs of court and complying with the law, while one case was pending at the end of the year.

Amongst the offences dealt with the following are included:—Neglect to Register Births; neglect to Register Deaths; neglect to furnish Certificate of Marriage; giving false information when registering hirths and deathe; failure of Registrar to deliver certified copies of entries to Superintendent Registrar; neglect to comply with Requisition to correct entry; failure of Coroner to furnish Certificate of Finding of Jury; failure of Caretaker of Burial Ground to furnish Notification of Burial.

A sum of £120 was provided iu the estimatee to meet legal charges. During the year the total cost of the legal service of the Department was £77 4s. 7d., of which eum £35 4s. 0d. was paid for local professional assistance, and £5 12s. 0d. for mileage to the Regietrars.

MARRIAGES.

The number of Marriages registered during the year was 22,662, corresponding to 5·16 per 1,000 of the estimated population,* which rate is 0·10 below that for the previous year, but 0·08 above the average for the ten years 1896-1905.

Among the 22,662 Marriages registered during last year, 15,818 were between Roman Catholics; 3,604 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,330 were in Presbyterian Meeting-houses; 485 in "Registered Buildings" belonging to various religious denominations; only 400 by civil contract in the Registrars' offices; 9 were according to the usages of the Society of Friends; and 16 according to the Jewish rites.

The rate represented by the number of Roman Catholic Marriages is 4·86 per 1,000 of the estimated Roman Catholic population, being 0·14 over the corresponding average rate for the preceding ten years, and higher than the Roman Catholic Marriage rate for any of these years, except that for the years 1904 and 1905, in each of which it was 4·95; and the other Marriages represent a rate of 6·05 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·02 under the corresponding average rate.

The 3,604 Marriages celebrated according to the rites of the Church of Ireland, include 50 by special licence, 3,050 by licence, 486 after the publication of banns, 6 on Registrar's certificate, and in 12 instances no information was afforded as to which of these methods was adopted.

* The rates for the total of Ireland and for the county boroughs of Dublin and Belfast and for Londonderry county and county borough are based on the estimated population in the middle of the respective years; those for the provinces for the years 1900-1906, and for the remaining counties for the year 1906 on the population according to the Census of 1901, and those for the provinces for the years 1897-1899 on the population according to the Census of 1891. The provinces and counties adopted for 1899-1906 are the areas as constituted after alterations made under the Local Government (Ireland) Act, 1898.

During the year 1906 there were issued by the Registrars 799 Licences for Marriages in Registered Buildings and in the Registrars' Offices.

In the following summary the number of Marriage Licences issued by the Licensing Ministers of the several Presbyterian bodies is given.

Presbytery or Synod	Number of Licensing Ministers on 31st December, 1906.	Number of Registered Meeting-houses on 31st December, 1906	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland	151	598	2,171
2. Remonstrant Synod of Ulster	9	19	36
3. Presbytery of Antrim	6	10	22
4. United Presbytery or Synod of Munster	1	2	0
5. Presbytery of Ireland (United Free Church of Scotland)	6	9	28
Total	173	638	2,257

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may be lawfully solemnized without special licence. From this it appears that, on the 31st December, 1906, there were 1,489 churches and chapels of the Church of Ireland, 638 registered Presbyterian Meeting-houses, and 410 "Registered Buildings" belonging to various religious denominations. These numbers show no change as regards the Church of Ireland, an increase of 2 in the number of Presbyterian Meeting-houses; and no change in the total number of "Registered Buildings" as compared with the previous year.

The number of "Registered Buildings" belonging to the several religious bodies is shown in the following list, revised for the year, 1906.

Denominations	No. of Places of Worship.
Methodists,	255
Reformed Presbyterians,	40
Independents, or Congregationalists,	29
Baptists,	27
Christian Brethren,	20
Moravians, or United Brethren,	9
Salvation Army,	9
Seceders,	8
"The Catholic Apostolic Church,"	2
Non-Subscribing Unitarians,	2
Unitarians,	1
Covenanters	1
Welsh Presbyterians,	1
United Original Seceders,	1
"Protestant Dissenters,"	1
Non-Subscribing Christians,	1
"Undenominational,"	1
Jews,	1
"Holiness Movement" Church	1
Total,	410

Of the 22,662 marriages registered during the year 1906, there were recorded—in the first quarter, 7,020; in the second, 5,095; in the third, 5,169; and in the last, 5,378.

Printed image digitised by the University of Southampton Library Digitisation Unit

As derived from the numbers given in the Abstract of Marriagee, commencing on page 2, it wonld appear that of the total marriages 89·1 per cent. were those of bachelors with spinsters; 6·9 per cent. those of widowers and epinsters; 2·5 per cent. of bachelors and widows; and 1·6 per cent. were those of widowers and widows. Thus of the men married 8·5 per cent. were widowers, and 4·1 per cent. of the women were widows; and in 11 instances, in every 100 marriagee, one or both of the contracting parties had been in the married state hefore.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1896-1906, and the average number for the ten years 1896-1905, distinguishing the number of Roman Catholic Marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

It is a matter of regret that I have to report that there is an increaeing majority of instancee in which the ages of the persone married are not stated, as a complete record of the ages of the persons married would be valuable. The reqnirements of the law are technically complied with hy the entry in the age column of "minor" or of "full age," as the case may he, and there eeeme to be a general and increasing inclination to take advantage of this circumetance, as in 1906 the ages of both parties were specified in 2,868 cases only, being about one-eighth of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the agee of both parties were given in 13,910 inetances.

Of 22,662 men married during the year, 311, or 1·37 per cent., were minors; and of the women married 1,096, or 4·84 per cent., were nnder age.

Of thoee married under age in 1906 the highest proportion of huehands (1·71 per cent.) wae in the province of Leinster, and of wives (5·89 per cent.) in the province of Ulster.

It may be obeerved that the percentage of persons married in Ireland, who were under age, ie very far helow the corresponding percentages in England and Scotland.

The eignatures of the contracting pereons, as seen in the marriage registers or certificates, afford a crude test of the progress of elementary education. In the year 1906, 20,710, or 91·4 per cent., of the hnshande, and 21,253, or 93·8 per cent., of the wives, wrote their namee, and the remainder eigned by marks, as againet 19,336, or 83·9 per cent., of the huebands, and 19,707, or 85·5 per cent., of the wives, in the year 1896; 15,771, or 76·6 per cent., of the hushande, and 15,381, or 74·7 per cent., of the wivee, in the year 1886; and 17,983, or 68·1 per cent., of the hnsbande, and 16,536, or 62·7 per cent., of the wives, in the year 1876.

Printed image digitised by the University of Southampton Library Digitisation Unit

When compared with the corresponding results in the first of the preceding ten years, these figures show a considerable improvement, the percentage of persons married in 1896 who wrote their names, being—men 83·9, and women 85·5; and they exhibit a great advance when compared with the percentage for the year 1864, when the general registration of marriages in Ireland was established, in which year but 61 in every 100 men, and 50 in every 100 women married, wrote their names.

The percentages among men for the several provinces last year range from 87 in Connaught to 94 in Munster; and, for women, from 92 in Connaught to 96 in Munster.

Both of the persons married signed the register by "mark," in 581 cases and the register was thus signed by either the husband or the wife, in 2,199 cases, so that in 2,780 cases, or 12·3 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 19,882 or 87·7 per cent., *both* parties wrote their names.

In the following table the proportion per cent. of persons married in each of the eleven years 1896-1906, who wrote their names in the registers or certificates; of minors; of widowers; and of widows; is given for Ireland, and for each of the four provinces.

TABLE VI.—Showing, as regards the **Marriages** in Ireland, and in each of the Four Provinces, during the years 1896—1906, the proportion per cent. of Persons who **signed their names,** of Persons **not of Full Age,** and of **Re-marriages.**

Printed image digitised by the University of Southampton Library Digitisation Unit

The highest provincial marriage rate per 1,000 of the population according to the Census of 1901, was in the province of Ulster, in which, however, the rate was only 5·7 per 1,000 of the population of the province; Leinster comes next with 5·5 per 1,000; Munster third, with 4·6 per 1,000; and Connaught last, the rate being 3·6 per 1,000.

The highest marriage rate for county, or county borough areas (7·9 per 1,000 of the population) was in the county borough of Dublin; and the lowest 3·1 in each of the counties of Clare and Mayo. Between these extremes the most favourable rates were 7·8 for the county borough of Belfast, 5·7 for the county of Dublin, and 5·6 for the county and county borough of Londonderry, and the least so 3·4 for the county of Galway, 3·4 for the county of Roscommon, and 3·8 for the county of Meath.

BIRTHS.

Of the births registered during the year 1906, namely, 103,536—53,386 were boys and 50,150 were girls, or 106·5 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 42·4, or 23·6 per thousand, which is 0·4 above the average rate per 1,000 for the ten years, 1896-1905.

The 103,536 children whose births were registered in Ireland during the year 1906, include 100,845, or 97·4 per cent. who were legitimate, and 2,691, or 2·6 per cent. who were illegitimate, being equal to the corresponding average percentages for the preceding 10 years. These results compare favourably with the returns for most other countries.

The number of male children born in wedlock during the year was 52,028 and of female, 48,817, or 106·6 of the former to every 100 of the latter; of the illegitimate children 1,358 were males and 1,333 females, being 101·9 boys to 100 girls.

Of the children born in Ulster, 3·5 per cent. were illegitimate; in Leinster, the percentage was 2·7; in Munster, 2·2; and in Connaught 0·7, as shown in Table VII.

TABLE VII.—The Percentage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1902-1906 by Provinces.

Provinces	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.

CONNAUGHT .	99·3	99·5	99·3	99·3	99·3	0·7	0·5	0·7	0·7	0·7

The rates represented by the total births registered in the respective provinces during the year 1906 were—Leinster, 23·8 per 1,000 of the population in 1901; Munster, 22·2; Ulster, 24·3; and Connaught, 21·2.

Taking the county or county borough areas, the four highest birth-rates were 33·0 for Dublin county borough; 31·2 for Belfast county borough; 24·4 for county Kildare; and 24·1 for county Antrim. The four lowest rates were—18·3 for county Cavan: 18·4 for Queen's county; 18·7 for county Roscommon; and 19·0 for county Longford.

Printed image digitised by the University of Southampton Library Digitisation Unit

In the first six months of the year (181 days) 51·7 per cent. of the total births were registered, and in the second half of the year (184 days) 48·3 per cent.

The total number of births registered in the first quarter was 26,456; in the second, 27,086; in the third, 25,440; and in the fourth, 24,554.

DEATHS.

Dnring the year 1906, the number of deaths registered in Ireland was 74,427, equivalent to 1 in 59, or 17·0 per 1,000 of the population estimated to the middle of the year. The deaths of males amounted to 37,131, and those of females to 37,296, the rate per 1,000 males and 1,000 females, respectively, heing 17·1 and 16·9.

The death-rate (17·0) is 0·1 below that for the year 1905, and 0·9 nnder the average rate for the preceding ten years.

Many of the Registrars have, as heretofore, furnished me with valuahle notes on the sanitary condition of their respective districts with their Quarterly Reports. These notes were published in the Quarterly Returns issued from this Department, and it is most desirable that they should receive the careful attention of the various Local Authorities entrusted with the administration of the Pnhlic Health Acts.

The recorded death-rates for the four provinces show that for Connaught to be 12·6; for Munster, 15·4; for Ulster, 18·0; and for Leinster, 18·5 per 1,000 of their respective populations aocording to the Census of 1901.

The five county or county borough areas having the lowest mortality rates per 1,000 of the population were :—county Mayo, 11·7; county Leitrim, 12·0; connty Galway, 12·8; county Kerry, 12·9; and county Roscommon, 13·1.

The highest rates are as follows:—Dnblin county borongh, 25·0; Belfast county horough, 20·6; connty Armagh, 19·0; county Monaghan, 18 9; and county Down, 18·1.

In the first half of the year the number of deaths registered generally exceeds the number registered in the second half, the deaths registered in the six months of 1906, Jannary to June inclusive, constituting 54·3 per cent. of the total for the year, and those in the remaining six months 45·7 per cent.

The deaths registered in each quarter are represented by the following annual rates:—First quarter, 18·9 per 1,000 of the population; second, 18·0; third, 14·4; and fourth, 16·6. The rate for the first quarter is 2·5 below, the second 0·7 below, the third 0·4 below, and the fourth 0·1 ahove the corresponding average rates for the respective quarters in the ten years 1896-1905.

Of the 74,427 *deaths registered during the year, as will be observed from the table on pp.* 136–145, 3,038 *took place in Infirmaries and General and Special Hospitals*; 1,444 *in Public Lunatic Asylums*; 10,721 *in Workhouses and Workhouse Hospitals*; *and* 59,224 *were of persons who died "At their Own Homes, &c."*

The number of deaths, in "Infirmaries and General and Special Hospitals," is eqnivalent to 4·1 per cent. of the total deaths registered in Ireland, the percentages for the four provinces varying from 0·6 in Connaught to 9·3 in Leinster. More than fourteen per cent. of the deaths registered occurred in Workhouses or Workhouse Hospitals, the respective percentages for the provinces being—Leinster, 16·7; Munster, 19·2; Ulster, 10·8; and Connaught, 11·3.

CAUSES OF DEATH.

The classification of causes of death which is adopted in the abstracts of this Report is taken from the Official Nomenclature of Diseases which was published in 1906 by the Royal College of Physicians of London. In this work the causes of death are arranged in two divisions, namely :—General Diseases—and Diseases of Particular Organs. The General Diseases are sub-divided into the following:—Infective Diseases—Intoxications—and Other General Diseases not included in the two preceding groups.

Diagram 2, facing this page, depicts the relative mortality from 22 of the principal causes of death, as returned in Ireland for the year 1906. From this it appears that Tuberculous Disease caused 11,756 deaths; the deaths of 8,409 persons were referred to *Old Age*; Diseases of the Heart accounted for the deaths of 8,321 persons, and to Bronchitis 7,176 deaths were attributed. These figures represent the rates of 2·68, 1·92, 1·90, and 1·64 respectively, per 1,000 of the estimated population.

GENERAL DISEASES.

There was no record of mortality from small-pox during the period under notice. During the 43 years, from the year 1864 (when the registration of deaths commenced) to the year 1906, deaths from small-pox were most numerous in the year 1872, in which year 3,248 persons were the victims of the disease; after the year 1882 the mortality did not exceed 16 in any one year until 1894, when 72 deaths from small-pox were registered in the whole of Ireland; in the succeeding year 146 deaths were registered; in the 7 years following, the total mortality was 12; in 1903, however, the fatalities numbered 40, declining to 16 in 1904, and further declining to 5 in 1905. As before stated, not one death from small-pox was registered in Ireland during the year 1906.

CONNAUGHT												

*The Rates for the years 1897-6 for the Provinces are based on the Census of 1891 those for the years 1901-1906 on the Census of 1901. See Note (*) on page vii.

Printed image digitised by the University of Southampton Library Digitisation Unit

The following statement shows the number of deaths from small-pox registered during each of the years 1882-1906, together with the number of all successful primary vaccinations registered in each of those years.

The Registrars of Births and Deaths report that 90,171 Successful Primary Vaccinations were registered by them during the year 1906.

Year.	Number of Deaths registered from Small-pox	Number of *all* successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of *all* successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of *all* successful Primary Vaccinations in each year.

The subjoined Table gives particulars regarding the Vaccination of the Children whose Births were registered in Ireland during each of the years 1904-1905, with their percentage to the total Births registered during each year.

Years.	Successful Vaccinations (Form A, First Schedule).		Vaccinations Postponed (Form B, first Schedule.)		Insusceptible of Vaccine Disease (Schedule D.)				Died before Vaccination.		Unaccounted for, owing to removal from District or otherwise.		Defaulters who have not been granted an extension of time under Form B, First Schedule.		Total Births Registered.	
					On the ground of constitutional insusceptibility of the Vaccine Disease.		In respect of the children having already had Small-pox.									
	Number	Per-centage	Number	Per-centage	Number	Per-centage	Number	Per centage	Number	Per-centage	Number	Per-centage	Number	Per-centage	Number	Per-centage
1904	84,068	81·0	2,184	2·1	118	0·1	2	0·0	7,105	6·9	3,774	3·6	6,560	6·3	103,811	100·0
1905	81,326	82·0	2,505	2·4	90	0·1	.	.	6,624	6·5	3,625	3·5	5,662	5·6	102,832	100·0

The above tabular statement shows that of the children whose births were registered in the year 1904, 81 per cent., and that of the children whose births were registered in the year 1905, 82 per cent. were registered as having been successfully vaccinated.

Measles.—There were 388 deaths from measles registered in the year 1906, of males 213, and of females 175 ; the total represents a rate of 0·09 per 1,000 of the estimated population of the country ; the rates in the preceding 3 years were 0·16, 0·12, and 0·18 per 1,000, and the average rate for the 10 years 1896-1905 was 0·17 per 1,000. Of the males, 182 and of the females, 134 were deaths of children under the age of 5 years. On pages 136 and following it is seen that there were 51 deaths registered in the County and County Borough of Londonderry, of which figure all were registered in the Union of Londonderry ; in Dublin County Borough 49 deaths were registered, also 49 deaths from measles were registered in the County of Donegal ; of these 22 were in the Union of Dunfanaghy and 16 in the Union of Glenties ; in the County of Monaghan 33 deaths were registered ; in the County of Armagh 30 deaths were registered ; of these 10 were in the Union of Armagh ; there were 29 deaths from measles registered in Belfast County Borough ; and in the County of Down 24 deaths were registered ; of these 23 were in the Union of Newtownards.

Scarlet Fever.—In the decennial period from the year 1896 to 1905 the highest number of deaths from scarlet fever recorded in any one year of the decade was 752 in the year 1896, and the lowest number recorded in any year of the decade was 170 in the year 1905; in the year under consideration the mortality declined to 149 deaths (of males 75 and of females 74 deaths). Of the deaths (149) there were 30, or about one-fifth of the total, registered in the County Borough of Belfast.

Typhus.—The deaths from typhus, which had declined steadily from 128 in the year 1900 to 53 in the year 1904, rose in the year 1905 to 68, and further increased in the period under review to 86 (of males 48 and of females 38 deaths).

In 34 of the Unions, of which there are in number 159 in Ireland, deaths from typhus were registered as follows:—In the Province of Leinster, there was one death in North Dublin Union, also one in each of Athlone and Kells, there were 3 in South Dublin Union, and 4 in Mountmellick Union; in the Province of Munster, deaths from typhus were recorded in the following Unions:—one death in each of Carrick-on-Suir, Clogheen, Kenmare, Kilmallock, Macroom, Middleton, Nenagh, and Waterford Unions, 2 deaths in Skibbereen, 3 deaths in each of the Unions of Bantry and Tipperary, 4 deaths in Cork, 5 in Tralee and 11 in Dingle; in the Province of Ulster, in each of the Unions of Magherafelt, Millford, and Omagh one death was recorded, in Carrickmacross there were 2 deaths, and in each of the Unions of Belfast, Clogher, and Glenties 3 deaths were registered. In the Province of Connaught, deaths from typhus occurred as following:—in Tobercurry Union one death; in Ballina, Oughterard and Sligo 2 deaths in each; in Claremorris 3 deaths; in Westport 4; in Belmullet 5 deaths, and in Galway Union 7 deaths from typhus were registered during the year.

Whooping-cough.—The mortality from whooping-cough (929 deaths), although it largely exceeded that of the previous year (581 deaths), was below the average of the decennial period 1896-1905, namely, 1,147; the total deaths comprise the deaths of 420 males, and 509 females, and represent an annual death rate of 0·21 per 1,000 of the estimated population of Ireland. Of the 420 deaths of males, 389 were those of children under 5 years, and of the 509 deaths of females 466 were of children under 5 years of age. Of the total deaths, 378 were in Belfast County Borough; these represent an annual rate of 1·03 per 1,000 of the estimated population of that city; in the County Borough of Dublin 91 deaths from whooping-cough were registered. Deaths from whooping-cough ranged from 0 in each of the Counties of Carlow, Westmeath, Wicklow, Limerick (including Limerick County Borough), Tipperary N.R., and Sligo, to 23 deaths in each of the Counties of Donegal and Mayo; 35 in Louth; 37 deaths in the County of Antrim; 54 in County Down; 60 in Londonderry (including Londonderry Co. Borough); 64 in County Cork (including Cork Co. Borough); and, as before stated, 91 in the County Borough of Dublin and 378 in the County Borough of Belfast.

Diphtheria.—Deaths from diphtheria (including those returned as from membranous croup) amounted to 349; the deaths of males numbered 162 and the deaths of females 187; the total represents an annual mortality rate of 0·08 per 1,000 of the estimated population, and is in excess of the number registered in the year 1905 by 44 deaths, but 8 below the average number of deaths registered from the disease in the preceding decade, 1896-1905. Of the 162 deaths of males, 90 were those of children between the ages of 1 year and 5 years, and of the 187 deaths of females, 95 were those of children at the afore-mentioned age period. Of the total deaths (349) there were 40 recorded in Belfast County Borough; 38 in Dublin County Borough; 25 in each of the Counties of Cork and Limerick (including their respective County Boroughs); 24 in Antrim and 23 in the County of Donegal.

Enteric Fever.—The decline in the mortality from enteric fever in Ireland is a gratifying feature in the Report which I have the honour of submitting to Your Excellency. The figures in Table IX., page xiv., show that in one year, namely, 1898, no less than 1,284 of the inhabitants of Ireland died from the disease. From that year up to 1904 (with the exception of the year 1901) there was a large and steady decrease of mortality from enteric fever; however, in 1905 there was a slight accession of mortality, *i.e.*, from 466 deaths in 1904 to 502 deaths in 1905; this, however, has been more than compensated for by the figures returned for the year 1906, the number of deaths registered being 394, as against an annual average of 755 for the 10 years

Printed image digitised by the University of Southampton Library Digitisation Unit

1896-1905, or expressed in rates per 1,000 of the estimated population, the rate for the year 1906 was 0·09 per 1,000 against a mean annual rate of 0·17 per 1,000 for the decade preceding. Of the deaths 97 (or about 25 per cent. of the total) were registered in Belfast County Borough; 48 were registered in Dublin County Borough; 35 in Tyrone County; 31 in the County of Cork (including Cork Co. Borough); 19 in the County of Kerry; 18 in Tipperary, S R.; 14 in Londonderry (including the Co. Borough); 14 in Limerick (including the Co. Borough); 13 in the County of Down; 12 in the County of Antrim, and 9 in the County of Dublin; in no other County did the mortality exceed 9 deaths. In one County, viz., Kilkenny, there was no mortality from enteric fever recorded. Of the total deaths there were 220 of males, only 12 of these being under 5 years of age, and of the 174 deaths of females, only 10 were under 5 years of age.

The deaths of 30 persons were classified to pyrexia (origin uncertain), this heading comprising deaths formerly returned as from simple, continued, or ill-defined fever.

Diarrhœal Diseases.—The year 1906 is marked by a high death rate for this group of diseases, designated diarrhœal diseases, which includes deaths returned as from diarrhœa due to food, epidemic diarrhœa or infective enteritis, *diarrhœa*, dysentery, and English cholera; deaths which are returned as from *gastro-enteritis, gastric catarrh*, enteritis, are classified to diseases of the digestive system. In the aggregate, deaths from diarrhœal diseases amounted to 1,675, representing an annual death rate of 0·38 per 1,000 of the population of Ireland estimated to the middle of the year. It is a subject of regret that these deaths exceed the numbsr registersd in any one year of the preceding four years, the average annual number of deaths for this period being 1,215. The total (1,675) for the year under notice includes 11 deaths from diarrhœa due to food, 537 deaths from epidemic diarrhœa or infective enteritis, 1,086 deaths from *diarrhœa*, not otherwise defined, and 41 deaths from dysentery. Diarrhœal diseases are especially destructive to infant life, no less than 1,026 of the deaths recorded being those of infants under 1 year of age. *In the diagram facing page* xxxv. *which shows the mortality from the 14 principal causes of deaths of infants under 1 year of age it will be seen that the pillar representing deaths from diarrhœal diseases† stands second on the list.* In the Abstract on page 136, which shows the number of deaths by counties, it appears that, of the total deaths, 379 were registered in Belfast County Borough, 359 in Dublin County Borough, 157 in County Cork (including the County Borough), 93 in the County of Dublin, 65 in the County of Antrim, 58 in the County of Londonderry (including the County Borough), 53 deaths in each of the Counties of Armagh and Down, and 52 in the County of Limerick (including the County Borough). In the County of Waterford, which includes the County Borough, only 18 deaths from diarrhœal diseases were registered. The foregoing figures which, in the aggregate, number 1,287, or 0·60 per 1,000 of the total populations‡ (census and estimated) of these areas, when compared with 388 deaths or 0·16 per 1,000 of the census population for the remaining counties of

* Formerly described as "Simple Continued Fever."
† Including, for the purposes of this diagram, deaths from enteritis and *gastro-enteritis*.
‡ See note (*) on page vii.

Printed image digitised by the University of Southampton Library Digitisation Unit

Ireland, appear to show that the mortality from this group of diseases is associated with the conditions of life which obtain in urban communities; and that the investigation and amelioration of the associated conditions is the problem which all sanitarians have to consider when they prepare to grapple with the deeply important duty of protecting the helpless infants who are brought into life in the unsanitary surroundings of the city slums.

Influenza.—The mortality which was attributed to influenza in the course of the year shows a decline, when compared with the preceding year, the number of deaths registered in 1906 being 978, as compared with 1,219 deaths registered in the year 1905; the mortality is also considerably below the average annual mortality for the decennial period 1896-1905, and also below that of any one year included in this period with the exception of the year 1896—the first year of the period. The deaths from influenza represent a rate of 0·22 per 1,000 of the estimated population of the whole of Ireland. On referring to the abstracts commencing on page 112, it may be seen that of the 978 deaths, 466 were those of males and 512 were those of females; moreover it may be seen that under the age of 5 years 79 deaths were registered and that from the ages of 45 years and upwards deaths from this disease were more numerous than in the earlier age periods. Of the total deaths of males (466) there were 335 deaths of persons aged 45 years and upwards, and of the total deaths of females (512) there were 386 who had passed the age of 45 years. In a special table on page xviii, it will be seen that in the Province of Leinster the County Kilkenny stands highest, with a mortality of 0·29 per 1,000; in Munster the County of Waterford heads the list with 0·29 per 1,000; in Ulster in which the total mortality from this disease numbers 452 deaths, the highest number—98 deaths—was registered in the County of Down; and in Connaught there were 39 deaths in the County of Galway and 37 deaths in the County of Roscommon. It may be further seen in diagram 2, facing page xiii. that influenza stands eleventh on the list of 22 principal causes of death in Ireland for the year 1906.

Cerebro-spinal Fever.—The deaths from cerebro-spinal fever, registered in Ireland during the year 1906, were 12 in number, 4 being of males and 8 being of females. However, since the close of the year 1906 a sharp epidemic of the disease has occurred in Belfast, which has extended into the June Quarter of 1907. It is, however, happily showing a tendency to decline.

I may here venture to offer a suggestion to the Medical Practitioners in Ireland, namely:—that the term *cerebro-spinal meningitis* is not a definite one, and that deaths so certified have to be queried in order to find out whether the cause of death was from the epidemic form of the disease or otherwise. As cerebro-spinal fever is now prevalent in Belfast it would facilitate the classification of deaths if the official term, cerebro-spinal fever, were used in all cases where the epidemic variety of the disease was the cause of death; and that the term *cerebro-spinal meningitis*, without an explanation of the nature of the disease, should be abandoned.

Rabies, Hydrophobia.—No death from Rabies was registered in Ireland during the year 1906. The last year in which mortality from this disease occurred was in 1898, during which year 4 deaths were registered. In the decennial period 1891-1900 Hydrophobia, Rabies caused 35 deaths, 27 being of males and 8 of females.

Septicæmia, Septic Intoxication, Pyæmia (not puerperal).—Of 59 deaths from Septicæmia, septic intoxication, 39 were of males and 20 were of females; there were 16 deaths of males from pyæmia and 7 of females.

Puerperal Pyæmia, Septicæmia, Septic Intoxication.—The deaths of women from septic conditions under this head amounted to 234 and represent a death rate of 2·26 per 1,000 of the number of births which were registered during the year; the deaths are 7 over the number registered from these causes in the year 1905, and 8 over the average annual number of such deaths in the decennial period 1896-1905. Reference will be made in a subsequent paragraph (*vide* page xxxi.) which deals with the deaths of all women, returned as being caused by or associated with pregnancy or childbearing.

The deaths (234) include 134 returned as caused by puerperal septicæmia, puerperal septic intoxication; 6 by puerperal pyæmia; 16 by phlegmasia alba dolens; and 78 returned as from *puerperal fever* (not otherwise defined).

* These deaths are included in the general tables of Causes of Death.

Printed image digitised by the University of Southampton Library Digitisation Unit

Pneumonia.—The figures under the heading "pneumonia" include deaths which are returned as being caused by, 1—lobar pneumonia; 2—broncho-pneumonia; 3—epidemic pneumonia; and 4—*pneumonia* (not defined); in the aggregate such deaths amounted to 3,796, representing an annual rate of 0·87 per 1,000 of the estimated population of Ireland; this rate exceeds that of any year in the preceding decade, the average annual rate for this period being 0·80 per 1,000 of the estimated mean annual population. The total deaths include 164 (of males 101 and of females 63) from lobar pneumonia; 1,120 (619 of males and 501 of females) from broncho-pneumonia; the deaths of one male and of one female from epidemic pneumonia; and the deaths of 2,510 (1,498 males and 1,012 females) from *pneumonia* (not defined).

The mortality from pneumonia forms a large factor in the general death rate of Ireland, and such deaths in the year 1906 were over 5 per cent of all deaths registered. In diagram 2, facing page xiii., it may be seen that the pillar denoting the mortality from pneumonia stands fifth in the list of 22 principal causes of death in Ireland.

An examination of the age periods at which deaths from broncho-pneumonia occur shows that this disease is dangerous to infant life in a marked degree. Of 619 deaths of males, 333 were children under five years of age, and of 501 deaths of females, 244 were under 5 years of age; this disease is, however, a frequent complication of measles and of whooping-cough, the characteristic symptoms of which diseases may have disappeared before the child has been placed under medical supervision. The distribution of mortality from pneumonia may be studied geographically in the Abstracts on page 136 and following pages. In the Province of Leinster out of a total of 1,199 deaths from pneumonia (all forms), 517 were registered in the County Borough of Dublin, representing a rate of 1·76 per 1,000 of the estimated population; in Munster, out of 858 deaths, 418 were in Cork County, including the County Borough, 115 were in Limerick County (including the County Borough) and 100 were in the County of Kerry; in Ulster, of a total of 1,442 deaths, 546 deaths were registered in Belfast County Borough, and represent a rate of 1·49 per 1,000 of the estimated population; in the County Down there were 160 deaths, in Antrim 149, in Armagh 123, in Londonderry 114, and in Donegal 105. Of a total of 297 deaths from pneumonia returned for Connaught, 128 were registered in the County of Galway. From the figures it may be seen that, of the total deaths, 1,063 were registered in Dublin and Belfast; this number is more than 28 per cent. of all the deaths from pneumonia registered, and tends to indicate that the mortality from this disease is affected by the conditions which are known to exist in urban areas.

TUBERCULOSIS.

In my Annual Report for the year 1905 I had the honour of inviting Your Excellency's especial attention to the havoc which the disease known as tuberculosis is making amongst His Majesty's subjects in Ireland. I feel that it is my duty again to ask your gracious consideration of this important matter which recurs in the Report I now have the honour of submitting.

In introducing this subject, I may state that the fall of the mortality rate for tuberculous disease in England and Wales during the 42 years from 1864 to 1905, as may be seen in the diagram facing this page, is a proof that the disease is at least capable of being successfully combated, and for the purposes of the militant sanitarian may be looked upon as a preventable disease. I cannot, Your Excellency, say that it is a matter of much congratulation that the high death rate of 2·9 per 1,000 in the year 1904 for all forms of tuberculous disease has declined to 2·7 per 1,000 in the years 1905 and 1906. When I come to enumerate the figures which I have compiled, I find that there were 11,756 victims, inhabitants of Ireland; in other words, out of a total of 74,427 deaths registered in Ireland during the year 1906, no less than 11,756, or 15·8 per cent., were sacrificed to a disease which is in a great degree preventable. It is a difficult matter for me to dissociate myself from responsibility in such appalling circumstances, and I cannot feel that my duty terminates in merely collecting and classifying these most depressing statistics. Year after year these facts are published, and although the members of the medical profession are strenuous in trying to awaken the public mind to a state of affairs that can only be considered as destructive to the community, yet, comparatively speaking, our countrymen are not alive to the dangers which threaten them.

Printed image digitised by the University of Southampton Library Digitisation Unit

No doubt many efforts have been and are still being made with a view of combating the scourge. Amongst these agencies may be mentioned the National Society for the Prevention of Consumption and other forms of Tuberculosis, which has done good service in drawing attention to the ravages of the disease, while the Women's National Health Association of Ireland, recently inaugurated and presided over by Her Excellency the Countess of Aberdeen, will no doubt aid materially in bringing prominently forward the importance of this and other pressing questions of hygienic interest.

Our people have shown that they are not slow to appreciate the benefits of vaccination as a protection from small-pox, and when they are thoroughly awakened as to the infectious character of tuberculous disease they will be the first themselves to aid in its prevention.

With the view of bringing this question graphically before the public, I have reproduced two diagrams in this Report. In the diagram numbered 2, facing page xiii, it is seen that the pillar representing the mortality from tuberculous disease far out-tops the other 21 pillars which represent some of the principal causes of death in Ireland for the year 1906.

Diagram 3, facing page xxiii., shows a comparison of the death rates for all forms of tuberculous disease in Ireland for the 43 years 1864-1906, as compared with those for England and Wales and Scotland. This shows that while in England the rate has declined from 3·3 per 1,000 in 1864 to 1·6 per 1,000 in 1905, and in Scotland from 3·6 per 1,000 in 1864 to 2·1* per 1,000 in 1905, it has risen in Ireland from 2·4 per 1,000 in 1864 to 2·9 in 1904 and to 2·7 per 1,000 in 1905 and 1906.

The deaths from all forms of tuberculous disease, amounting, as before mentioned, to 11,756, include 8,933 deaths (of males 4,412 and of females 4,521) from tuberculous phthisis (*phthisis*); 797 deaths from tuberculous meningitis (of males 394 and of females 403); 299 deaths from tuberculous peritonitis (of males 135 and of females 164); 167 deaths from *tabes mesenterica* (of males 84 and of females 83); 12 deaths from lupus (of males 3 and of females 9); 633 deaths attributed to tuberculous diseases of other organs (of males 352 and of females 281); 858 deaths returned as from tuberculosis or general tuberculosis (of males 411 and of females 447); and 57 deaths returned as from *scrofula* (of males 29 and of females 28).

Tuberculous Phthisis.—The deaths from tuberculous phthisis, including those returned as from *phthisis*, were 8,933 in number, and represent an annual rate of 2·04 per 1,000 of the estimated population. A reference to the following tabular statement shows the respective death rates per 1,000 of the population for Ireland during the year 1906, by sexes, and age-periods. Table XIV. on page xxv. gives particulars for a period of 36 years regarding deaths from all forms of tuberculous disease in Ireland; and on pages 114-115 of the abstracts the number of deaths by age-periods and sexes is given for the different forms of the disease; there it may be seen that by far the greater number of the decedents were in the effective age periods of life, the highest number for both sexes falling in the age period between 25 and 35 years.

The following tabular statement shows, by sexes and by certain age periods, the total number of deaths from phthisis registered in Ireland during the year 1906, with the respective death rates per 1,000 living at each age period.

AGE PERIODS	Deaths from Phthisis in Ireland.					
	Total of both Sexes		Of Males		Of Females

Printed image digitised by the University of Southampton Library Digitisation Unit

Tuberculous Meningitis.—The total deaths (797) correspond to an annual rate of 0·18 per 1,000 of the estimated population, the deaths of males (394) to a rate of 0·18 per 1,000 of the estimated male population; and the deaths of females (403) to a rate of 0·18 per 1,000 of the estimated female population of the country. Of the males who succumbed, 196 were under the age of 5 years, and of the females, 190 were under 5 years of age.

Tuberculous Peritonitis.—The deaths from tuberculous peritonitis, including those returned as from *tabes mesenterica*, numbered 466, and are equal to a rate of 0·11 per 1,000 of the estimated population. Of the deaths, 219 were of males and 247 were of females.

Other Tuberculous Diseases.—The deaths from lupus, tuberculous disease of other organs, tuberculosis, general tuberculosis and *scrofula* in the aggregate numbered 1,560, and represent a rate of 0·36 per 1,000 of the estimated population. Of this total 795 were deaths of males, and 765 were deaths of females.

In the abstracts, commencing on page 136, the number of deaths from tuberculous diseases which occurred in the whole of Ireland, and in each of the Provinces, the Counties, and Unions is set forth.

TABLE XIV.—Showing the Number of Deaths from the following causes, viz., Tuberculous Phthisis and Phthisis, Tuberculous Meningitis, Tuberculous Peritonitis and Tabes Mesenterica, Other Forms of Tuberculous Disease and Scrofula, and from all causes, registered in Ireland in each of the thirty-six years 1871–1906, with the Rate per 1,000 of Estimated Population represented by (*a*) Deaths from the above-mentioned forms of Tuberculosis, (*b*) Deaths from All Causes; and the percentage of total Deaths caused by the tuberculous diseases referred to.

Years	Number of Deaths from				Total Deaths from all the foregoing causes.		Total Deaths from all causes.		Per-centage of Deaths caused by the Diseases named in Columns 2, 3, 4, and 5

Alcoholism.—The persons whose deaths were attributed directly to delirium tremens, or to chronic alcoholism, numbered 209; of this total 174 were deaths of males, and 35 were deaths of females; the number of deaths attributed to acute alcoholic poisoning is not included in the above total, but may be found in the table on page xxxiii The figures as above do not fairly represent the mortality which is caused by alcoholic excess, which produces disease in many organs which sooner or later terminates life. The deaths in 1906 from alcoholism are 19 above the number recorded in 1905.

Rheumatism.—Acute rheumatism or rheumatic fever caused the deaths of 136 persons, of whom 66 were males and 70 were females; the deaths of 15 males and 33 females were attributed to *rheumatism of heart*; and 162 males and 257 females died from chronic rheumatism. Rheumatic arthritis and rheumatic gout caused the deaths of 23 males and of 55 females.

Gout.—Gout was the registered cause of death of 12 persons; 8 of these were men, all over 45 years of age, and 4 were women, all being over 35 years of age.

Malignant Disease.

Under the general head of malignant disease, all deaths from carcinoma, sarcoma and cancer (undefined) are arranged. It may be seen in the table on page xxvii., and also in the Abstracts that such deaths in the aggregate amounted to 3,481 in the period now under consideration. This figure represents an annual death rate of 0·79 per 1,000 of the population of Ireland estimated to the middle of the year 1906; of the total deaths 1,566 were of males, and 1,915 were of females. When compared with the preceding year it appears that the deaths from malignant disease in 1906 were 190 above the number which occurred in 1905, namely, 3,291 (representing an annual rate of 0·75 per 1,000), which figure was 466 in excess of the annual average for the 10 years 1895-1904, the mean annual rate for the decade 1896-1905 being 0·63 per 1,000.

In Table XV. on page xxvii., the deaths from malignant disease registered in Ireland during the year 1906 are given, the parts affected being stated, also the sexes of the decedents, and the deaths at different age-periods, with rates calculated on the estimated population living at each age period. From the table it appears that the death rate for males at all ages was 0·72 per 1,000, and that the death rate for females at all ages was 0·87 per 1,000. Among the males the age-period from 75 and upwards shows the highest rate, namely, 4·92 per 1,000 of the population of all males living at this period; among females the highest rate (4·63) was at the age-period between the ages of 65 and 75 years.

As the deaths from malignant disease are not very numerous in the earlier periods of life, the deaths of persons under 35 years of age may be omitted in making calculations, and rates calculated on the populations living at the age-periods above 35 years. Calculations made on this basis show that the males who died from malignant disease, aged 35 years or upwards, represent a rate of 2·07 per 1,000 of the estimated male population at these ages: and the females a rate of 2·36 per 1,000 of the estimated number of females in the population living aged 35 years or upwards.

A reference to pages 116-117 of the Abstracts shows that of the deaths of males from malignant disease, 459 were from carcinoma, 74 from sarcoma, and 1,033 were returned as from cancer or malignant disease (not otherwise defined). The deaths of females from these conditions were 574, 69, and 1,272 respectively. The number of deaths from malignant disease occurring in each Union may be seen in the Abstracts; it is, however, necessary to bear in mind that many of these deaths take place in Institutions, to which the patients have been removed for treatment, and which are not situate in the Union in which the patients resided—and it is not practicable to make a distribution of institution mortality under existing circumstances. This remark applies particularly to Dublin, Belfast, and Cork, whose hospitals receive many cancer patients who are sent up for treatment from all parts of the country.

In the following tabular statement the number of deaths returned as being caused by tumours (not including deaths from tumours of the brain, uterus, or ovary) is given by sexes and parts affected. In all these deaths there was no information available regarding the pathological structure of the tumours.

Statement showing the parts affected by the Tumours which caused the deaths of 26 males and 34 females.

Parts affected	Males	Females
Eyeball	.	1
Larynx	1	.
Stomach	3	4
Intestine	1	1
Rectum	1	.
Liver	3	.
Peritaneum	.	1
Neck	3	.
Mesentery	.	2
Bladder	3	1
Prostate	1	.
Thigh	.	1
Abdomen	4	12
Pelvis	.	2
Others, or not stated	6	9
Total	26	34

Diabetes Mellitus.—The deaths from diabetes mellitus numbered 340, including the deaths of 202 males and 138 females; in the three years preceding, the total deaths from this disease were 307, 359, and 308, respectively.

Diseases of Particular Organs or Parts.

Meningitis.—To meningitis or inflammation of the brain or its membranes, 736 deaths were attributed; of this figure 389 were deaths of males and 347 were deaths of females; of the males 170 and of the females 157 were under the age of 5 years at their decease. The total (736) represents an annual rate of 0·17 per 1,000 of the population; in the year 1905 the rate represented by deaths from meningitis was 0·19 per 1,000 of the population, estimated to the middle of that year.

Softening of the Brain.—The deaths returned as being due to softening of the brain were 162 in number. Of the total 94 were deaths of males and 68 were deaths of females. These figures show an increase of 20 in the deaths of males over the year 1905, the number of deaths of females being equal in each of the years 1905 and 1906.

General Paralysis of the Insane.—The number of deaths attributed to general paralysis of the insane was 67, namely:—of males 53 deaths and of females 14 deaths; in the preceding year the total deaths from this cause were also 67; of this figure 55 were deaths of males and 12 were deaths of females. Of the 53 deaths of males in 1906, all save 7 were over the age of 35 years, and all the females were above the age of 35 years.

Epilepsy.—A total number of 310 deaths (of males 162 and of females 148) were caused by epilepsy; of the deaths of males, only 5 took place under the age of 5 years, while 3 deaths of females at this age period were registered.

Convulsions.—As may be seen in the diagram facing page xxxv., which illustrates 14 of the principal causes of infant mortality occurring in the year 1906, the deaths of infants under one year from convulsions stand third in the row of pillars, and represents

Printed image digitised by the University of Southampton Library Digitisation Unit

the deaths of 1,206 infants from *convulsions*, a term which the Official Nomenclature of Diseases refers to as "being the name of a symptom should only be used when more precise information is wanting." The total deaths referred to this condition amounted to 1,463 (of males 828 and of females 635 deaths). The total represents an annual death rate of 0·33 per 1,000 of the estimated population. Taking the number of deaths returned from *convulsions* of infants under one year of age, namely, 1,206, it is found that such deaths constitute 12·5 per cent. of all the deaths of children under one year of age registered during the year; the corresponding percentage in the year 1905 was 13·1.

Locomotor Ataxy.—During the year the deaths of 42 males and of 4 females were caused by locomotor ataxy; the total is identical with the number of such deaths in 1905, when 43 males and 3 females were stated to have died from the above cause.

Neuritis, Peripheral, Poly-neuritis.—The deaths of 22 males and of 20 females were attributed to one or other of the causes in the above heading.

Tumour of the Brain.—All the deaths certified as being caused by tumour of the brain, in which the nature of the disease is not specified, are made the subject of a special enquiry, and when the information is available such deaths are then assigned to syphilis, tuberculosis, malignant disease, or such other cause as may be indicated in the reply of the medical practitioner who supplies the further information. The deaths from tumour of the brain (47 in number) concerning which no further information could be elicited include the deaths of 22 males and of 25 females.

Diseases of the Heart.—From the detailed examination of the certified copies of causes of deaths in Ireland it appears that diseases of the heart caused in the aggregate a total of 8,321 deaths; this figure represents an annual death rate of 1·90 per 1,000 of the estimated population, or 11·2 per cent. of the total deaths from all causes registered in Ireland in the year 1906. It appears from the abstracts on pages 116 and 117 that of males there were 903 deaths from valvular heart disease (not including 8 deaths from infective endocarditis), 30 deaths from pericarditis, 18 deaths from hypertrophy of heart, 39 from angina pectoris, 72 from dilatation of heart, 115 from fatty degeneration of heart, and 2,808 deaths from *syncope, heart disease* (not specified); the corresponding figures for the deaths of females were 1,010 from valvular heart disease (not including 13 deaths from infective endocarditis), 10 from pericarditis, 11 from hypertrophy of heart, 27 from angina pectoris, 90 from dilatation of heart, 114 from fatty degeneration of heart, and 3,074 from *syncope, heart disease* (not specified).

Diseases of Blood Vessels.—In the aggregate, deaths from diseases of blood vessels amounted to 3,186 (of males 1,465 and of females 1,721 deaths), and correspond to an annual rate of 0·73 per 1,000 of the estimated population. The deaths of 538 males and 612 females were due to cerebral hæmorrhage; 745 males and 929 females were returned as having died from *apoplexy* or *hemiplegia*; 36 males and 15 females died from aneurysm; 91 males and 104 females from senile gangrene; 15 males and 11 females from embolism or thrombosis (not cerebral); 5 males and 12 females from phlebitis; 3 males and 6 females from varicose veins, and 32 males and also 32 females from other diseases of blood vessels.

Bronchitis.—By far the greater number of the deaths which are referred to diseases of the respiratory system are due to bronchitis; in the year under review deaths from the former amounted to 8,683, including 7,176 from bronchitis; these figures correspond to the rates of 1·98 and 1·64 per 1,000 respectively. As the total number of deaths from all causes in Ireland during the year 1906 was 74,427, it would appear that nearly 10 per cent. or one person of 10 who died during the year were the victims of bronchitis. From the report of the Registrar General of England and Wales for the year 1905, it appears that the death rate from bronchitis was only 1·14 per 1,000, or in other words if this death rate obtained in Ireland there would have been only 5,002 deaths instead of 7,176 deaths from bronchitis. This comparison with England and Wales tends to show that the people of Ireland are living in more unfavourable conditions than the people in England, and the difference in the death rates from bronchitis in England and Ireland may be considered to some extent "preventable mortality," and one which

Printed image digitised by the University of Southampton Library Digitisation Unit

could be diminished by improving the conditions of the people, particularly as regards proper housing accommodation, diet, clothing and the skilled nursing of the bronchitis patient.

Laryngitis, Croup.—The deaths returned as being caused by laryngitis were of males 83 and of females 51; four deaths of males were due to membranous laryngitis (not diphtheritic) and the death of one female child was attributed to the same cause; to *croup*, neither spasmodic nor membranous, is attributed the deaths of 134 male children, 124 of whom were under 5 years of age, and 119 female children, of whom 101 were under 5 years of age.

Pleurisy.—Pleurisy caused 178 deaths; of the total, 98 were deaths of males and 80 were those of females.

In 29 instances the cause of death was returned as from empyema, but on further inquiry, information was obtained which resulted in 13 of the 29 deaths being assigned to the disease which caused the condition of empyema.

The following Tables (A and B) show the result of the queries issued regarding 87 deaths which had been returned as directly caused by empyema during the years 1904, 1905, and 1906 by diseases or causes, sexes, and age-periods.

TABLES (A AND B).—Showing for the years 1904, 1905, and 1906, by age-periods, the diseases or causes with which the deaths directly attributed to Empyema of 87 persons (69 males and 18 females) were associated.

(A.)—Diseases or causes (by Age-Periods) with which 69 Deaths of Males from Empyema were associated.

Gastric Ulcer.—During the year gastric ulcer caused 300 deaths; of the total 125 were deaths of males, and 175 were of females.

Appendicitis, Perityphlitis.—The figures for 1906 show an increase of 47 over the number of deaths registered under this heading in the year 1905, viz.: in 1906, 136 deaths and in 1905, 89 deaths. Of the deaths in 1906, 80 were of males and 56 were of females.

Printed image digitised by the University of Southampton Library Digitisation Unit

Peritonitis.—The number of deaths which were finally classified under this heading for the year 1906 was 128, 70 being those of males and 58 of females. In the preceding year such deaths numbered 296, of males 165 and of females 131. An explanation of the decline in the number of deaths ascribed to peritonitis is supplied by the fact that in all the instances (263) in which death was certified as being directly due to this condition, queries asking for further information were issued, and in 168 instances information was supplied which resulted in the deaths being assigned to the diseases or causes which originated the condition. Among the deaths thus assigned 23 were added to intestinal obstruction, 22 to appendicitis, 18 to tuberculous peritonitis, 17 to accidental causes, 16 to gastric ulcer, and 9 to puerperal fever, as the result of the replies of the Medical Practitioners or Coroners to whom the queries were issued.

Other Diseases of the Digestive System.—Amongst this group—as may be seen on pages 118 and 119 of the abstracts—*gastric catarrh* and other diseases of the stomach (not returned as malignant) caused the deaths of 460 males and of 429 females; there were 73 deaths of males and 86 deaths of females from hernia; 218 deaths of males and 228 of females from intestinal obstruction; the numbers of deaths from cirrhosis of the liver were of males 202 and of females 128; other diseases of the liver and gall bladder accounted for the deaths of 183 males and of 181 females.

Acute Nephritis, Chronic Nephritis.—Of the total number of deaths from acute and chronic inflammations of the kidney, there were 242 deaths of males classified to acute nephritis, uræmia, and 591 to chronic Bright's disease, albuminuria; while under the former heading the deaths of 198 females were tabulated, and under the latter 449 deaths of females.

Diseases of the Uterus and Ovary.—It appears that in this class of diseases, there were 44 deaths from ovarian tumour and 40 deaths from uterine tumour; no further information was available regarding the nature of the tumours in these cases.

In the Cancer table on page xxvii., it will be seen that there were 39 deaths of females from malignant disease of the ovary, and 237 deaths from malignant disease of the uterus; these deaths are included in deaths from carcinoma, sarcoma, or from cancer (undefined) in the figures presented in the abstracts.

Pregnancy and Childbirth.—In a paragraph on page xxi. of the text, reference has already been made to the deaths of women as associated with pregnancy or child-bearing, such deaths may be discussed in three categories :—I.—Deaths from puerperal septic diseases (already mentioned). II.—Deaths of women from causes that are considered to be of an obstetric nature, and III.—Deaths which, although they are associated with pregnancy or childbearing, may be considered to be caused by the invasion of the system at this critical period by some serious disease.

In the aggregate the deaths in these three categories amounted to 676, representing an annual death rate of 6·53 mothers for every 1,000 births registered in the course of the year. In the year 1905 the total of such deaths was 656, which figure represented a death rate of mothers of 6·38 per 1,000 of the births registered in Ireland during that year. Of the total deaths in 1906 there were 234—representing a death rate of mothers of 2·26 per 1,000—from puerperal septic diseases; and there were 373 deaths, equal to a rate of 3·60 deaths of mothers for each 1,000 births registered in the year, which were assigned to accidents of pregnancy and childbirth, viz :—to obstetric causes; of these 29 deaths were due to abortion, miscarriage, 13 to puerperal mania, 40 to puerperal convulsions, 133 to placenta prævia, flooding, and 158 deaths to other accidents of pregnancy and childbirth. In addition to these deaths, it may be seen in Table XIII., page xxii., that there were 69 deaths of women associated with pregnancy or childbirth from various diseases, representing a rate of 0·67 deaths of mothers for each 1,000 births registered during the year. These latter deaths are included in the abstracts among the deaths for the diseases or causes with which the deaths from childbirth or pregnancy were associated.

Printed image digitised by the University of Southampton Library Digitisation Unit

Ill-Defined Causes of Death, and Uncertified Causes of Death.

I again make an earnest appeal to the Medical Profession in Ireland to abandon the ill-defined terms, denoting causes of death, that have not been recognised in the Official Nomenclature of Diseases, which was published in the year 1906. The figures in the abstract on page 129 appear to show that in no less than 13,808 instances the cause of death, as it appeared in the certified copies, was ill-defined, as follows:—from *atrophy* or *debility*, 4,936 deaths; from *old age*, 8,409 deaths; from *dropsy, ascites*, or *anasarca*, 75 deaths; from *tumour*, 60 deaths; from *abscess*, 26; from *hæmorrhage*, 10; and 292 from other ill-defined or unascertained causes.

The large proportion of uncertified deaths in Ireland (24·4 per cent. of all deaths registered) during the year 1906 is a matter of grave importance both from the public point of view, as well as from the point of view of the Profession of Medicine, and is a subject which should receive the serious attention of those who are in the positions of Medical Practitioners. In England and Wales the percentage of uncertified deaths was 1·6 of all the deaths registered in 1905, and in Scotland the percentage of uncertified deaths was 2·4 of all the deaths which were registered in Scotland in the year 1904.

No douht the large number of uncertified deaths in Rural Districts in Ireland compared with the sister countries is to some extent due to ths custom which prevails in some of the Rural parts of this couutry of not seeking medical advice, especially for the aged and those suffering from chronic forms of disease, and also to the very large areas of most of the Rural Dispensary Districts which iuvolves geographical difficulties both with the people in sending for medical help and the Medical Officers in attending to their requirements. In October, 1905, I issued a circular to all Medical Registrars, impressing upon them the importance of certifying the Cause of Death in every case in which they were professionally in attendance; and I also addressed the Local Government Board with the view to their using their influence with the Dispensary Msdical Officers in this important matter. The percentage of such deaths of all deaths registered in 1902 was 27·6; in 1903, 28·3; in 1904, 28·3; in 1905, 26·8; and in 1906, 24·4, showing a slight improvement in the last year as compared with previous years.

Violence.

Deaths from violence are classified accordiug to the nature of the application of the violence into accidental, homicidal, and suicidal fatalities. The total nuuber of deaths from accident, homicide, and suicide which were recorded in the death registers of Ireland in the year 1906 was 1,875—by accident 1,685, by homicide 43, and by suicide 147 deaths. Of the total deaths attributed to accidental circumstances 1,126 were of males and 559 were of females. Among these, burns, scalds, or explosions caused the deaths of 181 males and of 241 females, 109 of the former figure and 108 of the latter being deaths of children under 5 years of age. There were 229 casualties by drowning among males and 52 among females; the deaths of males caused by accidents with vehicles and horses numbered 203 (including 17 by cycle accidents and 5 by motor accideuts) and of females 19 (including one by a motor accident); 124 males and 120 fsmales succumbed to the effects of falls; suffocation was the cause of death of 54 males and 35 females; of the former figure 36 were infants under one year of age, and of the latter 31 were under one year of age. There were 36 deaths by accidental poisoning, 31 of males and 5 of females. A table on page xxxiii., gives details relating to deaths by poisoniug, and includes deaths from homicide aud from suicide if occurring from this cause.

Of the 43 deaths referred to homicide, 23 of the victims were males and 20 were females.

Of those who were reported to have terminated their lives by their own act, 120 were males and 27 were females.

The certified copies did uot contain any record of death by execution in Irelaud during the year 1906.

Inquests.—There were 1,788 inquests reported to the Registrars during the year 1906, being one inquest to every 42 deaths registered.

AGES AT DEATH.

The following Statement shows by sexes the mortality from all causes in Ireland during the Year 1906, at the undermentioned age-periods per 1,000 of the number of persons living at these ages.

Sexes.	Mortality from all causes per 1,000 Living at Ages										
	All Ages	Under 5 Years	5—	10—	15—	20—	25—	35—	45—	55—	65 years and upwards
Males, ...	17·06	36·02	3·38	2·41	1·13	6·09	8·02	10·60	15·16	27·98	91·73
Females	16·87	31·10	3·08	2·41	5·13	5·80	8·22	10·19	14·35	28·83	94·41
Total, ...	16·96	33·61	3·68	2·91	4·63	5·91	8·12	10·50	14·87	28·16	93·07

Deaths of infants under one year old numbered 9,644 for the whole of Ireland, being equal to 93 deaths in each 1,000 of the births registered. The corresponding average rate for the preceding ten years was 102.

Amongst children under 5 years of age 14,647 deaths occurred—a mortality equal to 33·61 in every 1,000 of the number living at that age. Of these 8,013 were boys and 6,634 girls; the former number representing 36·02 in every 1,000 boys, and the latter 31·10 in every 1,000 girls under 5 years old.

The deaths of persons aged 65 years and upwards are equivalent to 93·07 per 1,000 of the number of the living at that age.

Among the deaths registered are 606 of persons stated to have been aged 95 years or upwards—312 males and 294 females; of these 133 (57 males and 76 females) were returned as having been aged 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable; but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found, in almost in every instance, that, so far as the Registrars could ascertain, the age was correctly stated.

INFANT MORTALITY.

The great interest which is being taken by sanitarians in the subject of infant mortality has decided me to present some special information on the subject. I have, therefore, prepared the diagram facing page xxxv., which shows the relative mortality from 14 of the principal causes or groups of causes of death of infants under one year of age. It may be seen from this diagram that atrophy and debility caused 2,423 deaths; diarrhœa, enteritis, and gastro-enteritis caused 1,397 deaths; convulsions, 1,206 deaths; and bronchitis 955 deaths of infants under one year of age. The rates per 1,000 births registered, represented by the deaths from the above causes, were 23·40, 13·49, 11·65, and 9·22 respectively.

I have also the honour of presenting a map, facing page xxxviii., showing the average annual death rate of infants for each 1,000 births registered during the 5 years 1902-6 for each Union in Ireland. It may be seen from this map that, while in the Rural Unions there is a low mortality, in the Unions which contain the County Boroughs and large Urban Districts a high rate of infant mortality obtains. In the aggregate, however, the infant mortality rate of Ireland compares favourably with that of other countries, as may be seen in the diagram facing this page, which shows a comparison of infant mortality for England and Wales, Scotland, and Ireland for the years 1864 to 1906. It appears from this that in England and Wales the infant mortality rate, which in 1864 was 153 per 1,000 births registered, was 133* in 1906; that in Scotland in 1864 the rate was 126 and in 1905 it was 116*; while the infant mortality rate for Ireland in 1864 was 98 per 1,000 births registered, and in the years 1904, 1905, and 1906 the rates were 100, 95 and 93 respectively.

In addition to the diagrams and maps I have prepared the following tables, which show the death rates of infants under one year of age in 15 age-periods for the principal causes of death, and by sexes for the Registrars' Districts containing the 22 principal Town Districts of Ireland. The preparation of these tables involved a

* Unrevised figure.

Printed image digitised by the University of Southampton Library Digitisation Unit

From a retrospect of the period covered by the foregoing Table, *i.e.*, for 1906, and the ten years preceding, it is found that in the year 1896 the prices of beef were lowest, when the average ranged from 43s. 6d. to 54s. per cwt., and in 1898, when they ranged from 44s. 6d. to 53s.; bread was cheapest in 1896, when the average price (1st quality delivered) was 5d. per 4lb. loaf. Oatmeal and potatoes were cheapest in 1896, in which year the average price of oatmeal (1st quality) was 12s. 7d. per cwt.; and the average prices of potatoes ranged from 1s. 11d. to 2s. 11d. per cwt. The highest price of bread was in the year 1898, when the 4lb. loaf averaged 6¼d., and in the same year the price of oatmeal was highest, viz., 15s. 3d. per cwt. The highest range for potatoes was from 3s. 4d. to 4s. 7d. per cwt. in 1900, and for beef from 55s. 6d. to 59s. 6d. per cwt. in 1902.

I have been favoured by the Local Government Board for Ireland with the Returns embodied in this Report relating to Pauperism in Ireland for which I desire to express my obligations. These showed that the average number of workhouse inmates in Ireland on Saturdays during the year 1906 was 44,461, being 380 over the average for the preceding year; and that the average number of persons receiving out-door relief (see Table XVII.) was 57,041, or 875 under the corresponding number for 1905.

THE WEATHER.

As heretofore through the kind permission of the Editor of the "Dublin Journal of Medical Science," the following particulars and those given on pages 147-168 are presented. These particulars have been abstracted from Returns of Meteorological Observations taken in the City of Dublin by Sir John W. Moore, B.A., M.D., DUB.; D.SC., OXON; F.R.C.P.I.; F.R. MET. SOC.; and published in the Journal during the years 1906-1907. The Tables on pages 169-171, also are founded on Sir John Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the daily maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least ·01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1906 was 29·948 inches. The highest observed reading was 30·700 inches at 9 A.M. on April 9th. The lowest observed reading was 28·568 inches, at 4.15 P.M. on February 10th. The extreme range of atmospherical pressure was 2·132 inches, as compared with 2·922 inches in 1905.

The *Mean Temperature* of the air for the year was 50·3°. The highest reading was 77·8° on September 2nd, and the lowest reading was 23·1° on December 30th. The average mean temperature for the years 1886-1905 was 49·7°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 49·4°.

Rain fell on 203 days, including snow or sleet on 24 days and hail on 31 days. The average annual number of rainy days in the years 1886-1905 was 195·7. The total rainfall measured 22·807 inches, compared with an average of 27·371 inches in the twenty years 1886-1905. During the first half of 1906 (January to June, inclusive) the rainfall was 12·641 inches on 109 days; during the second half (July to December, inclusive) 10·166 inches fell on 94 days.

As regards the *Direction of the Wind*, 730 observations were made during the year, with this result—N., 53; N.E., 60; E., 45; S.E., 55; S., 49; S.W., 137; W., 207; N.W., 93; Calms, 31.

In conclusion, I desire to express my indebtedness to Dr. Ninian M. Falkiner, Medical Superintendent of Statistics in this Department, for the valuable assistance he has afforded me in the preparation of this Report, especially those portions which deal with the Statistics of Disease and Causes of Death.

I have the honour to be,

Your Excellency's faithful Servant,

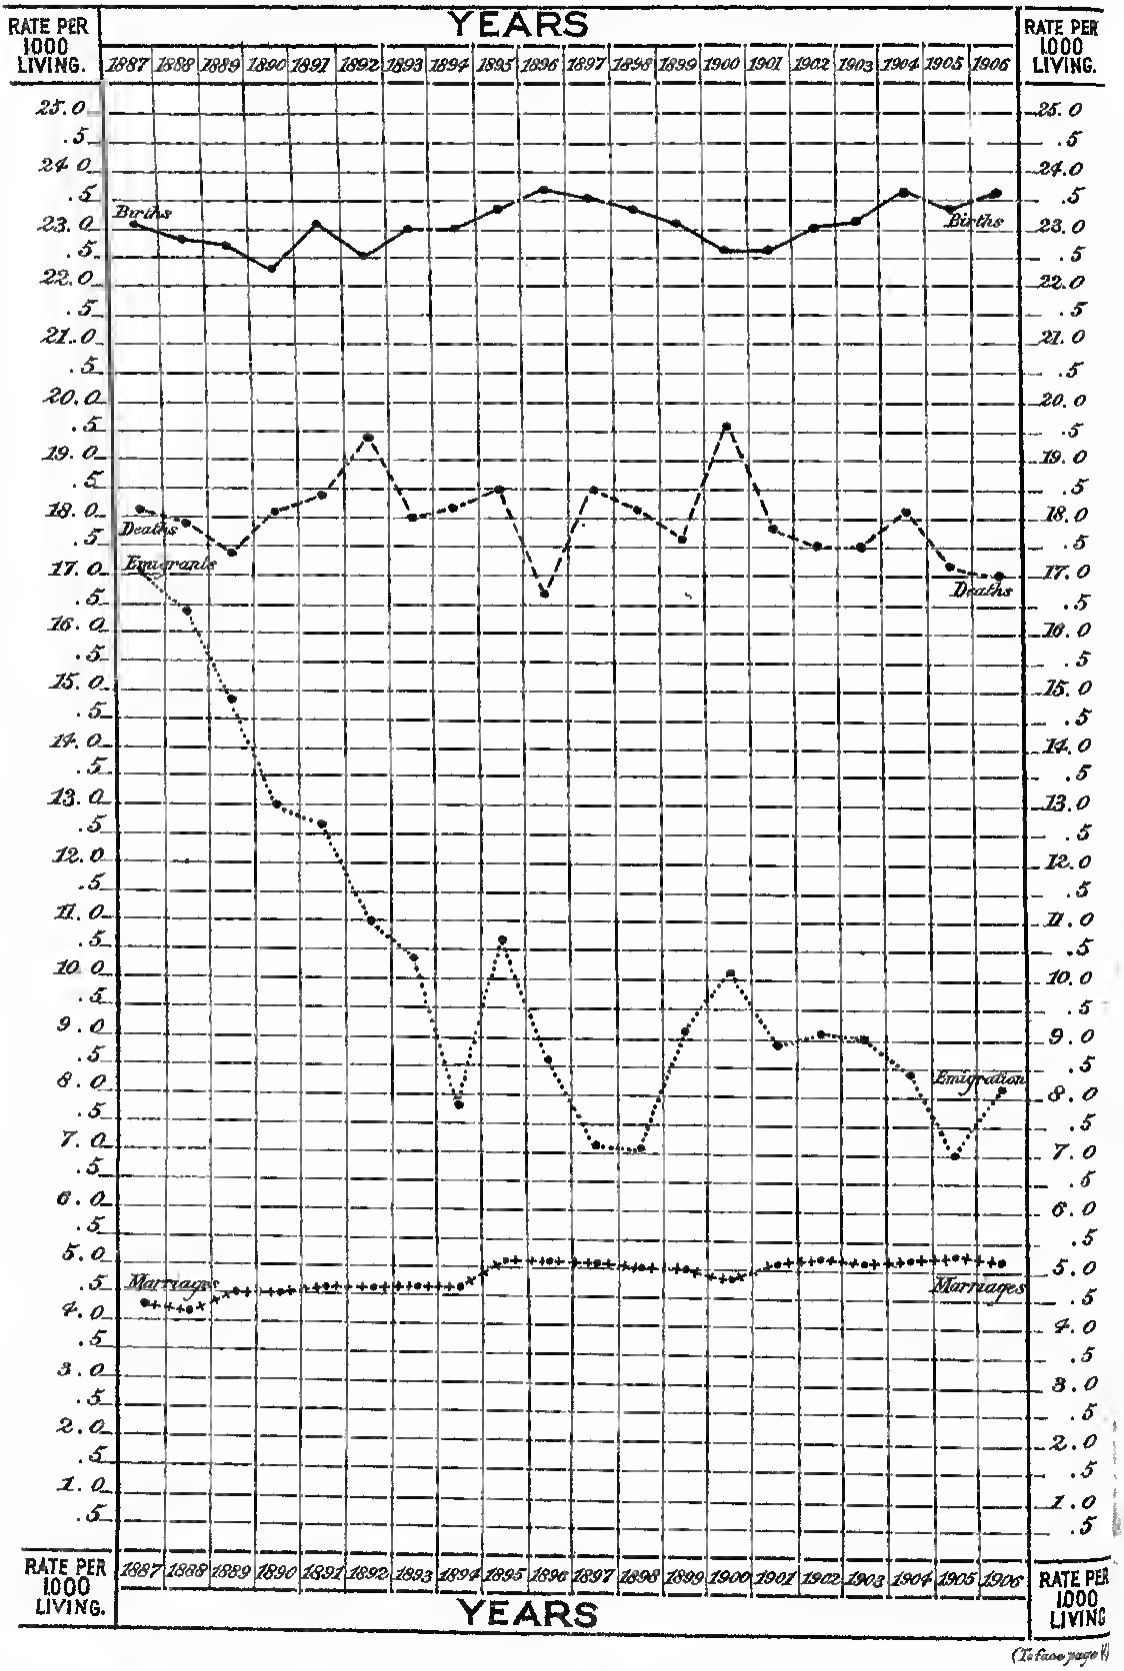

ROBERT E. MATHESON,

Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
DUBLIN, *31st July*, 1907.

MARRIAGES, BIRTHS, and DEATHS *registered* in the Year 1906.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS AND DEATHS, 1906.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the deaths* to the extent stated

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	Area in Statute Acres.	Population, 1901.	TOTAL. MARRIAGES.	TOTAL. BIRTHS.	TOTAL. DEATHS.	Births. Including Illegitimate Births. Males.	Births. Including Illegitimate Births. Females.	Illegitimate Births. Males.	Illegitimate Births. Females.	Deaths. Males.	Deaths. Females.	Excess of Births over Deaths.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances. See note (*), pp. 4-5.

The letter *W.* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the Births instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

NOTE.—This Table has been constructed for the years 1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841 according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over census numbers for 1861 and 1871 as explained for the last period.

1872-1905—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81, 1882-91, and 1892-1901, to allow for the discrepancy between the number thus arrived at for 1881, 1891, and 1901 respectively, and the population as shown by the Censuses in each of those years.

AGES of the POPULATION IN IRELAND according to the Census Returns of 1861, 1871, 1881, 1891, and 1901.

Periods.	Sexes.	Ages—Years.														Total.
		Under 1.	1 and under 5.	5 and under 10	10 and under 15.	15 and under 20.	20 and under 25.	25 and under 35.	35 and under 45.	45 and under 55.	55 and under 65.	65 and under 75.	75 and under 85.	85 and under 95.	95 and upwards

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1906.

By Sir John W. MOORE, B.A., M.D., DUBL.; D.SC., OXON.; F.R.C.P.I.; F.R.MET. SOC.

(Extracted from the *Dublin Journal of Medical Science*.)

January.—A month of W. and S.W. winds, often blowing strongly; heavy and frequent rains, and open, though not warm, weather. Rain was measured on 18 out of the first 20 days to the large amount of 3·909 inches, of which ·470 inch was recorded on the 1st and ·638 inch on the 2nd. During this period also atmospheric pressure was in very unstable equilibrium, depression after depression coming in from the Atlantic in quick succession and passing in an easterly or north-easterly direction across the northern parts of the British Isles. The month was mild generally in Europe, owing to the prevalence of S.W. and W. winds, but a notable exception occurred on the 24th and 25th, when keen frost was experienced in France and Germany within the area of an anticyclone which had been central over Ireland on the 22nd, and had subsequently drifted south-eastwards. At 8 a.m. of the 25th the thermic gradient was both steep and interesting—Munich reported 8° F.; Bodö (in Norway, some 30 degrees further N.) 40°; Paris, 19°; London, 45°. At the same time the barometer readings ranged from 28·90 inches on the west coast of Norway to 30·43 inches at Biarritz. At 8 a.m. of the 27th, the barometer was down to 28·18 inches at Bodö.

The duration of bright sunshine was estimated at 58·0 hours, the daily average being 1·9 hours. The corresponding values for January, 1901, were 6·4 hours and 2·1 hours; 1902, 5·4 hours and 1·7 hours; 1903, 5·6·5 hours and 1·8 hours; 1904, 4·9·75 hours and 1·6 hours; and 1905, 5·7·75 hours and 1·88 hours.

In Dublin the arithmetical mean temperature (43·9°) was above the average (41·6°) by 2·3 degrees; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 43·0°. In the forty-one years ending with 1905, January was coldest in 1881 (M. T. = 35·2°), and warmest in 1898 (M. T. = 47·8°). In 1905 the M. T. was 43·5°.

The mean height of the barometer was 29·848 inches, or 0·026 inch below the corrected average value for January—namely, 29·874 inches. The mercury rose to 30·636 inches at 9 p.m. of the 22nd, having fallen to 29·132 inches at 9 a.m. of the 9th. The observed range of atmospheric pressure was, therefore, 1·504 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·0°, or 0·4° above the value for January, 1905. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·52, the M. T. becomes 44·0°, compared with a thirty years' (1871-1900) average of 41·7°. The arithmetical mean of the maximal and minimal readings was 43·9°, compared with a thirty years' average of 41·6°. On the 28th the thermometer in the screen rose to 54·9°—wind, W.S.W. On the 23rd the temperature fell to 29·0°—wind, W.S.W. The minimum on the grass was 25·2°, also on the 23rd.

The rainfall was 4·127 inches, distributed over 22 days. Of this amount ·638 inch fell on the 2nd. The average rainfall for January in the thirty-five years, 1866-1900, inclusive, was 2·230 inches, and the average number of rainy days was 18. The rainfall, therefore, and rainy days were above the average. The record rainfall for January was in 1895—namely, 5·711 inches on 24 days. In 1876, only ·406 inch was measured on but 9 days. In 1905, 1·897 inches fell on 14 days.

The atmosphere was foggy on the 5th, 18th and 22nd. High winds were noted on 15 days, reaching the force of a gale on 7 days—the 1st, 9th, 11th, 13th, 14th, 15th and 24th. Snow or sleet fell on the 15th, 16th and 18th; hail on the 9th, 16th and 18th. Temperature reached or exceeded 50° in the screen on 15 days; while it fell to 32° in the screen on only 2 nights, compared with 2 nights in 1905, 3 in 1904, 7 in 1903 and 1902, 3 in 1901, 2 in 1900, 4 in 1899, only 1 night in 1898, 13 nights in 1897, only 3 in 1896, but 18 in 1895. The minima on the grass were 32° or less on 11 nights, compared with 9 nights in 1905, 11 in 1904, 9 in 1903, 12 in 1902, 11 in 1901, 13 in 1900, 16 in 1899, only 3 in 1898, 21 in 1897, 8 in 1896, and 29 in 1895.

In Dublin the rainfall up to January 31st, 1905, amounted to 4·127 inches on 22 days, compared with 1·897 inches on 14 days in 1905, 2·535 inches on 19 days in 1904, 3·269 inches on 20 days in 1903, 1·614 inches on 12 days in 1902, 2·672 inches on 17 days in 1901, 2·579 inches on 27 days in 1900, 2·483 inches on 24 days in 1899, 1·786 inches on 14 days in 1898, 2·694 inches on 17 days in 1897, only ·720 inch on 14 days in 1896; and with a thirty-five years' average (1866-1900) of 2·230 inches on 18 days.

Mr. Arthur Robert Moore, B.A., reports that, at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·848 inches, the range of atmospheric pressure being from 30·638 inches at 9 p.m. of the 22nd to 29·145 inches at 9 a.m. of the 9th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·6°. The arithmetical mean of the daily maximal and minimal temperatures was 44·2°. The screened thermometers rose to 54·8° on the 27th and 28th, and fell to 28·9° on the 23rd. On this latter date the grass minimum was 23·9°. On the 27th the black bulb *in vacuo* rose to 83·0°. Rain fell on 21 days to the amount of 3·868 inches, the greatest fall in 24 hours being ·555 inch on the 17th.

Printed image digitised by the University of Southampton Library Digitisation Unit

The duration of bright sunshine, according to the Campbell-Stokes recorder, was 42·7 hours, of which 5·4 hours occurred on the 27th. The mean daily sunshine was 1·4 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 41·8°, at a depth of 4 feet it was 44·7°.

Mr. R. Cathcart Dobbs, J.P., reports that, at Knockdolian, Greystones, Co. Wicklow, the rainfall was 4·065 inches on 14 days, compared with 1·005 inches on 11 days in 1905, 2·735 inches on 17 days in 1904, 3·300 inches on 15 days in 1903, 1·860 inches on only 9 days in 1902, and 4·035 inches on 16 days in 1901. Of the total amount ·800 inch fell on the 2nd and again on the 17th.

Miss Muriel E. O'Sullivan returns the rainfall at White Cross, Stillorgan, Co. Dublin, at 4·836 inches on 21 days, 1·130 inches being measured on the 2nd, ·570 inch on the 11th, ·515 inch on the 17th, and ·513 inch on the 1st.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 3·288 inches on 20 days. The greatest fall in 24 hours was ·440 inch on the 7th. The mean shade temperature was 40·0°, the extremes being—highest, 55° on the 27th; lowest, 26° on the 22nd. The greatest range of temperature in 24 hours was 15·5° on the 20th, and the least was 6·0° on the 25th.

The Rev. Arthur Wilson, M.A., reports that rain fell on 23 days at the Rectory, Dunmanway, Co. Cork, to the amount of 8·915 inches. The heaviest falls were 1·16 inches on the 1st, 1·02 inches on the 17th, ·88 inch on the 2nd, and ·80 inch on the 11th. 8·28 inches of rain fell from the 1st to the 18th inclusive. The last 13 days were very fine.

In Cork, Mr. William Miller registered at Wellesley Terrace a rainfall of 5·42 inches, or 1·42 inches over the average. Of the total amount 5·24 inches fell on the first 17 days, while only 0·18 inch fell during the last 14 days. There were 22 rainy days in the month. The largest measurement in 24 hours was 0·98 inch on the 2nd. In 1903, 8·07 inches fell on 26 days; in 1904, 5·30 inches on 26 days; and in 1905, 3·46 inches on 18 days.

Deputy Surgeon-General C. Joynt, M.D., F.R.C.P.I., recorded 4·375 inches of rain on 22 days at 21 Leeson Park, Dublin. The heaviest fall in 24 hours was ·660 inch on the 2nd, but on the 1st, and again on the 17th, the measurement was ·540 inch.

Mr. Robert O'B. Furlong, C.B., returns the rainfall at Cloneevin, Killiney, at 4·08 inches on 22 days. The maximal fall in 24 hours was ·88 inch on the 2nd. The average January rainfall of the 21 years (1885-1905) was 2·343 inches on 16·9 days. The present record is the largest rainfall for January at Cloneevin with the exception of 1895, when 5·93 inches were measured on 24 days. The lowest January rainfall was ·47 inch on 11 days in 1891. Snow fell on the 18th.

Dr. B. H. Steede reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell on 19 days to the amount of 4·608 inches. The heaviest falls in 24 hours were 1·008 inches on the 2nd, ·665 inch on the 17th, and ·556 inch on the 14th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 20 days to the amount of 4·84 inches, ·95 inch being measured on the 2nd. Temperature ranged from 54·0° on the 28th to 30·0° on the 23rd. The mean shade temperature was 43·3° Fahrenheit.

At the Ordnance Survey Office, Phœnix Park, Dublin, the rainfall was 3·565 inches on 22 days, ·520 inch being recorded on the 17th. The total amount of sunshine was 59·0 hours, of which 6·8 hours were registered on the 19th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 44·4°, being 0·3° above the average for January during 19 previous years (1873-83 and 1898-1905). The extremes were—highest, 54°, on the 3rd; lowest, 29·5°, on the 19th. At Bournemouth the mean was 43·8°, the extremes being—highest, 54°, on the 6th; lowest, 27°, on the 23rd. The mean daily range of temperature was 7·8°, at Bournemouth it was 9·5°. The mean temperature of the sea at Sandycove bathing-place was 44·3°, being 0·4° below the average for the month during the previous 8 years. The average relative humidity at 9 a.m. was 78 per cent., being 4 per cent. below the average for the month during the previous 5 years. The rainfall was 3·76 inches on 20 days, at Bournemouth it amounted to 6·14 inches. The total duration of bright sunshine was 62 hours, as compared with 59 hours at the Ordnance Survey Office, Phœnix Park, 44·1 hours at Birr Castle, 38·4 hours at Valentia, 40·8 hours at Southport, and 86·7 at St. Leonards.

February.—February, 1906, was a cold, changeable month, with frequent but not heavy rainfall—often in the form of hail or sleet. The barometer fell to 28·568 inches on the afternoon of the 10th, having been as high as 30·415 inches on the 7th. The night temperatures were steadily low, the mean grass minimum being only 29·4°, and the mean minimum in the screen being 34·0°—only on the 1st did the thermometer touch 50° in the screen. As in February, 1905—which, however, was a mild month—the amount of cloud was relatively small, and sunshine was in excess.

The duration of bright sunshine was estimated at 92·5 hours, or a daily average of 3·3 hours, compared with 79·25 hours, or a daily average of 2·8 hours in 1902, 63·5 hours or a daily average of 2·3 hours in 1903, only 43·0 hours or a daily average of 1·5 hours in 1904, and 97 hours or a daily average of 3·5 hours in 1905.

In Dublin the mean temperature (39·7°) was 2·8° below the average (42·5°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 38·2°. In the forty-one years ending with 1905, February was coldest in 1895 (M. T. = 34·2°), and warmest in 1869 (M. T. = 46·7°) and in 1903 (M. T. = 47·5°). In 1902 the M. T. was 39·3°; in 1903, 47·5°; in 1904, 40·7°; and in 1905, 43·6°.

The mean height of the barometer was 29·764 inches, or 0·091 inch below the average value for February—namely, 29·855 inches. The mercury rose to 30·415 inches at 9 a.m. of the 7th, and fell to 28·568 inches at 4.15 p.m. of the 10th. The observed range of atmospheric pressure was, therefore, 1·847 inches.

Pnnted image digitised by the University of Southampton Library Digitisation Unit

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 38·2°, or 4·8° below the value for January, 1906. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·50, the M. T. is 39·7°, compared with a thirty years' (1871-1900) average of 42·5°. On the 1st the thermometer in the screen rose to 50·1°—wind, W.; on the 12th it fell to 29·1°—wind, N.W. The minimum on the grass was 24·2° on the 21st.

The rainfall was 1·644 inches, distributed over 20 days. The average rainfall for February in the thirty-five years, 1868-1900, inclusive, was 1·990 inches, and the average number of rainy days was 16. The rainfall, therefore, was below, whereas the rainy days were much above, the average. In 1883 the rainfall in February was large—3·752 inches on 17 days, in 1879 also 3·706 inches fell on 23 days. On the other hand, in 1891, only ·042 inch was measured on but 2 days. In 1905, ·750 inch fell on 12 days.

The atmosphere was foggy on the 12th, 16th, 17th, 21st and 23rd. The amount of cloud—53·9 per cent.—was considerably below the average—66 per cent. At 9 p.m. it was only 52·1 per cent. High winds were noted on 12 days, and reached the force of a gale on 4 days—namely, the 8th, 10th, 11th and 22nd. Hail fell on the 3rd, 8th, 25th, 26th and 27th. Snow or sleet fell on on the 3rd, 8th, 9th, 13th and 24th. Lunar halos were seen on the 2nd and 7th. Solar halos appeared on the 15th, 21st and 24th.

The temperature reached or exceeded 50° in the screen on the 1st only, while it fell to or below 32° on 10 nights, compared with as many as 18 nights in 1895. The minima on the grass were 32° or less on 21 nights, compared with every night in 1895. The thermometer failed to rise to 40° in the screen on the 9th (Max., 38·4°). The highest minimum was 42·3° on the 1st.

In Dublin the rainfall up to February 28th, 1906, amounted to 5·771 inches on 42 days, compared with 3·872 inches on 29 days in 1901, 3·362 inches on 22 days in 1902, 5·503 inches on 35 days in 1903, 5·847 inches on 36 days in 1904, 2·647 inches on 26 days in 1905, and a thirty-five years' (1866-1900) average of 4·220 inches on 34 days.

At the Normal Climatological Station in Trinity College, Dublin, the observers, Mr. Horace H. Poole and Mr. Thomas H. Hill, report that the mean height of the barometer was 29·760 inches, the highest reading observed being 30·417 inches at 9 a.m. of the 7th, the lowest, 28·619 inches at 9 p.m. of the 10th. The mean temperature was 39·9°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 38·8°. Rain fell on 18 days to the amount of 1·536 inches, ·321 inch being measured on the 22nd. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 77·1 for 27 days, giving a daily average of 2·5 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 39·8°; at a depth of 4 feet, it was 43·4°.

The rainfall at Leeson Park, Dublin, is given by Dr. C. Joynt, F.R.C.P.I., as 1·755 inches on 19 days, ·475 inch having been measured on the 22nd.

At Wellesley Terrace, Cork, according to Mr. W. Miller, rain fell on 20 days to the amount of 2·85 inches, or 0·59 inch below the average for February. The heaviest falls in 24 hours were 0·42 inch on the 13th and again on the 18th. The rainfall of the first two months of 1905 was 4·88 inches on 34 days.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 5·28 inches on 22 days, the greatest fall in 24 hours being ·635 inch on the 10th, at 3 a.m. of which day a very loud peal of thunder was heard. The rainfall for January and February equals 14·195 inches.

At the Ordnance Survey Office, Phœnix Park, the rainfall was 1·945 inches on 20 days, the maximal measurement in 24 hours being ·320 inch on the 9th.

Miss Muriel E. O'Sullivan reports that at White Cross, Stillorgan, Co. Dublin, 1·499 inches of rain fell on 18 days, ·440 inch the maximum being measured on the 22nd. Since January 1, the rainfall equals 6·135 inches on 39 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 18 days to the amount of 2·03 inches, the greatest daily fall being ·68 inch on the 22nd. In February, 1901, the rainfall was 1·55 inches on 10 days; in 1902, it was 2·76 inches on 11 days; in 1903, it was 2·95 inches on 15 days, in 1904, 4·05 inches on 21 days, and in 1905, 1·07 inches on 12 days. The temperature in the shade ranged from 47° on the 1st, 7th, 9th, 24th and 28th to 29° on the 21st. The mean temperature in the screen was 39·6°, compared with 39·0° in 1902, 47·1° in 1903, 40·4° in 1904, and 43·6° in 1905.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 1·845 inches on 14 days. The heaviest fall in 24 hours was ·530 inch on the 18th. In February, 1900, the rainfall was 6·670 inches on 20 days; in 1901, 1·385 inches on 11 days; in 1902, 2·590 inches on 8 days; in 1903, 2·870 inches on 14 days, in 1904, 2·957 inches on 19 days; and in 1905, ·650 inch on 9 days. The total fall to February 28th, 1906, inclusive, was 5·910 inches on 28 days, compared with 1·655 inches on 20 days in 1905, 5·692 inches on 36 days in 1904, 6·170 inches on 29 days in 1903, 4·450 inches on 17 days in 1902, 5·420 inches on 27 days in 1901, 10·436 inches on 44 days in 1900, 8·610 inches on 42 days in 1899, 3·980 inches on 29 days in 1898, 5·190 inches on 37 days in 1897, and only 1·940 inches on but 17 days in 1896.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·249 inches on 20 days. The greatest fall in 24 hours was ·285 inch on the 18th. The mean shade temperature was 36·3°, the extremes being—highest, 48°, on the 26th; lowest, 25°, on the 11th and the 20th. The greatest range of temperature in 24 hours was 22° on the 8th.

The rainfall at Cloneevin, Killiney, Co. Dublin, as observed by Mr. Robert O'B. Furlong, C.B., amounted to 1·31 inches on 17 days, compared with 2·35 inches on 12 days in 1902, 2·08 inches on 14 days in 1903, 3·56 inches on 20 days in 1904, and ·79 inch on 14 days in 1905. The

Pnnted image digitised by the University of Southampton Library Digitisation Unit

average rainfall for February during 21 years, 1885-1905, at this station is 1·838 inches on 14 days. The greatest rainfall in 24 hours was ·24 inch on the 22nd. Since January 1st the rainfall was 5·39 inches on 39 days, compared with 3·08 inches on 26 days in 1905, 5·98 inches on 37 days in 1904, 4·90 inches on 35 days in 1903, 3·97 inches on 24 days in 1902, 4·39 inches on 28 days in 1901, 7·23 inches on 48 days in 1900, 6·28 inches on 36 days in 1899, 3·32 inches on 29 days in 1898, and 4·31 inches on 38 days in 1897. Snow and sleet fell on the 2nd, 8th and 25th.

Dr. B. H. Steede reports that the rainfall at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, was 2·207 inches on 20 days, compared with 1·296 inches on 11 days in 1901, 2·923 inches on 10 days in 1902, 3·096 inches on 16 days in 1903, 4·408 inches on 24 days in 1904, and ·848 inch on 10 days in 1905. The maximal fall in 24 hours was ·410 inch on the 18th. Up to February 28th, the rainfall at Newcastle amounted to 6·815 inches on 39 days, compared with 4·837 inches on 25 days in the corresponding period of 1901, 4·589 inchee on 22 days in 1902, 7·416 inches on 35 days in 1903, 7·718 inches on 42 days in 1904, and 2·175 inches on 21 days in 1905. At this Second Order Station the screened thermometers fell to 29·9° on the 12th, and rose to 48·0° on the 26th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health for Kingstown, reports that the mean temperature at that health resort was 40·7°, heing 2·3° helow the average for February during 19 previous years (1873-83 and 1898-1905). The extremes were—highest, 49·5° on the 9th; lowest, 29·5° on the 12th and 21st. At Bournemouth the mean was 40·2°, the extremes heing—highest, 50° on the 12th and 26th; lowest, 26° on the 26th. The mean daily range of temperature was 9·5°, at Bournemouth it was 11·5°. The mean temperature of the sea at Sandycove hathing-place was 41·7°, heing 1° hslow the average for the month during the past 8 years. The relative humidity was 78 per cent., heing 3 per cent. helow the average for the month during the previous 5 ysars. The rsinfall was 1·37 inches on 15 days; at Bournemouth it was 3·0 inches on 20 days. The total duration of bright sunshine was 113·5 hours as compared with 101 hours at the Ordnance Survey Office, Phœnix Park, 74·6 honrs at Valentia, 101·6 hours at Birr Castle, 98·4 hours at Southport, and 94·3 hours at St. Leonards.

March.—"March many weathere"—the old proverh was true of 1906. The month opened with a dull, damp, mild day—more like late Octoher than March. During the earlier part of the month the atmosphere was in a disturhed state over North-western Europe, while the harometer was high and relatively steady in the Msditerranean Basin. At 8 a.m. of the 8th, pressure ranged from 28·43 inches at Bodö in the North of Norway to 30·44 inches at Lyons. In the period from the 10th to the 13th a very energetic depression crossed the North of Ireland, the South of Scotland, the North Sea, and the South of Scandinavia to the Gulf of Bothnia. Its S.W. winds piled up the water of the English Channel in the Straits of Dover, and its N. winds in like manner acted on the North Sea, with the result that much damage was done to the English coast-line hy high tides and waves. So sharp a fall of temperature attended the change of wind that on the night of the 13th the thermometer went down to 17° at Wick, 18° at North Shields, and 19° at Nairn, and in central Scotland to 11° at Lairg and 8° at Fort Augustus. This arctic spell was followed hy a sudden increase of temperature on the 15th, amounting to 20° at some stations. On the 17th the thermometer rose to 64°, 65° and 66° at various inland English stations. From the 18th to the end of the month a cold period prevailed, strong and squally N. and N.E. winds bringing with them frequent showers of hail, graupel (soft hail), sleet and snow.

The duration of bright sunshine was estimated at 132·5 hours, compared with 159 hours in 1905, 101 hours in 1904, 110·75 hours in 1903, 94 hours in 1902, 132·5 hours in 1901, and only 84 hours in 1900. The daily average of bright sunshine was 4·3 hours, compared with 5·1 hours in 1905, 3·26 hours in 1904, 3·57 hours in 1903, 3 hours in 1902, 4·27 hours in 1901, and only 2·7 hours in 1900.

In Duhlin the arithmetical mean temperature (44·4°) was 0·8° above the average (43·6°). The mean dry-hulh readings at 9 a.m. and 9 p.m. wsre 43·3°. In the forty-one years ending with 1905, March was coldest in 1867 and 1883 (M. T. = 39·0°), and warmest in 1903 (M. T. = 48·1°). In 1905 the M. T. was 45·2°.

The mean height of the harometer was 30·023 inches, or 0·107 inch ahove the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·485 inches at 9 p.m. of the 19th and fell to 28·924 inches about noon of the 11th. The ohserved range of atmospheric pressure was, therefore, 1·561 inches.

The mean temperature deduced from daily readings of the dry-hulb thermometsr at 9 a.m. and 9 p.m. was 43·3°. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·485, the M. T. hecomes 44·2°. The arithmetical mean of the maximal and minimal readings was 44·4°, compared with a thirty years' (1871-1900) average of 43·6°. On the 16th the thermometer in the screen rose to 59·9°—wind, W.S.W.; on the 3rd the temperature fell to 31·9°—wind, W.S.W. The minimum on the grass was 27·8°, also on the 3rd, and again on the 30th.

The rainfall was 1·520 inches, distrihuted over 17 days. The average rainfall for March in the thirty-five years, 1866-1900, inclusive, was 1·950 inches, and the average numher of rainy days was 16·0. The rainfall, therefore, was below, while the rainy days were slightly above, the average. In 1867 the rainfall in March was very large—4·972 inches on 22 days. On the other hand, the smallest March rainfall was ·288 inch on 8 days in 1893. In 1900, only ·963 inch fell on 13 days. In 1905 ths rainfall was 2·731 inches on 20 days.

The atmosphere was foggy in the city on the 2nd, 10th and 13th. High winde were noted on 13 days, reaching the force of a gale on 3 occasions—namely, the 11th, 15th, and 26th. Snow or sleet occurred on the 11th, 12th, 13th, 24th, 25th, and 26th; hail also fell on the 11th, 13th, 18th, 24th, 25th and 26th. Temperature reached or exceeded 50° in the screen on 17 days, compared with 20 days in 1905, 10 days in 1904, 18 daye in 1903, 23 days in 1902, only 6 days in 1901, only

Pnnted image digitised by the University of Southampton Library Digitisation Unit

5 days in 1900, 19 days in 1899, 9 in 1898, 14 in 1897, and 21 in 1896. It fell to 32° in the screen on three nights—the 3rd, 13th and 14th—and on the 16th it rose to 59·9°. The minima on the grass were 32° or less on 12 nights, compared with 8 nights in 1905, 13 in 1904, 4 in 1903, 5 in 1902, 11 in 1901, 14 in 1900, 13 in 1899, 15 in 1898, 9 in 1897, and 8 in 1896.

The rainfall in Dublin during the three months ending March 31st amounted to 7·291 inches on 59 days, compared with 5·378 inches on 46 days in 1905, 7·938 inches on 55 days in 1904, 9·126 inches on 61 days in 1903, 5·114 inches on 43 days in 1902, 5·656 inches on 46 days in 1901, 6·698 inches on 63 days in 1900, only 1·650 inches on but 32 days in 1899, and a thirty-five years' (1866-1900 inclusive) average of 8·170 inches on 50·0 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. Thomas H. Hill, Sch., reports that the mean height of the barometer was 30·023 inches, the highest reading observed being 30·482 inches at 9 p.m. of the 19th and at 9 a.m. of the 20th; the lowest, 29·062 inches at 9 a.m. of the 11th. The mean temperature was 44·1°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 43·8°. Rain fell on 16 days to the amount of 1·382 inches, ·482 inch being measured on the 10th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 122·8, giving a daily average of 4·0 hours. The corresponding figures for 1904 were 89·75 hours and 2·9 hours, and for 1905, 148·0 hours and 4·7 hours. The mean temperature of the soil at 9 a.m. was 43·1° at a depth of one foot, and 44·0° at a depth of 4 feet.

Dr. B. H. Steede reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 1·785 inches on 17 days, compared with 4·212 inches on 23 days in 1905, 2·605 inches on 17 days in 1904, 8·186 inches on 30 days in 1903, 1·417 inches on 19 days in 1902, 1·798 inches on 14 days in 1901, and 892 inch on 12 days in 1900. On the 10th ·500 inch fell, and on the 13th ·407 inch. The total rainfall at this station from January 1st to March 31st, inclusive, was 8·600 inches on 56 days, compared with 6·387 inches on 44 days in the first quarter of 1905, 10·323 inches on 59 days in that of 1904, 13·602 inches on 65 days in that of 1903, 6·006 inches on 41 days in the same period of 1902, 6·635 inches on 39 days in that of 1901, and 10·631 inches on 57 days in that of 1900. The extremes of temperature were—highest, 57·3° on the 16th; lowest, 31·0° on the 14th.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, 1·755 inches of rain fell on 13 days. The corresponding figures for March, 1900, were 1·320 inches of rain on 14 days; for 1901, 1·840 inches on 14 days; for 1902, 1·660 inches on 17 days; for 1903, 5·050 inches on 25 days; for 1904, 2·415 inches on 17 days, and for 1905, 4·005 inches on 21 days. The maximal fall in 24 hours was ·500 inch on the 10th. The total rainfall since January 1st, equals 7·665 inches on 41 days, compared with 11·756 inches on 58 days in the first quarter of 1900, 7·260 inches on 41 days in the same period of 1901, 6·110 inches on 34 days in 1902, 11·220 inches on 54 days in 1903, 8·107 inches on 53 days in 1904, and 5·860 inches on 41 days in 1905.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 17 days to the amount of 1·80 inches, compared with 2·20 inches on 13 days in 1901, 1·98 inches on 18 days in 1902, 4·53 inches on 28 days in 1903, 2·50 inches on 21 days in 1904, and 3·31 inches on 28 days in 1905. The greatest daily rainfall was ·43 inch on the 10th. The temperature in the shade ranged from 59° on the 16th to 32° on the 3rd. The mean shade temperature was 43·9°, compared with 41·2° in 1901, 46·4° in 1902, 45·7° in 1903, 44·1° in 1904, and 45·0° in 1905. Since January 1st, 1906, the rainfall at this station amounts to 8·87 inches on 56 days, compared with 6·71 inches on 40 days in the first quarter of 1901, 7·02 inches on 43 days in 1902, 11·36 inches on 62 days in 1903, 10·14 inches on 67 days in 1904, and 6·76 inches on 56 days in 1905.

At White Cross, Stillorgan, Miss Muriel O'Sullivan measured 1·675 inches of rain on 17 days, the maximum in 24 hours being ·405 inch on the 10th. At this station the rainfall in the first quarter of 1905 equals 7·810 inches on 56 days, compared with 6·398 inches on 48 days in 1905.

Dr. C. Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park, Dublin, at 1·575 inches on 17 days, ·495 inch being measured on the 10th.

The rainfall at Cloneevin, Killiney, Co. Dublin, as returned by Mr. Robert O'B. Furlong, C.B., was 1·52 inches on 18 days, compared with 3·42 inches on 21 days in 1905, 2·01 inches on 17 days in 1904, 3·40 inches on 29 days in 1903, 1·50 inches on 21 days in 1902, 1·57 inches on 17 days in 1901, ·94 inch on 14 days in 1900, and a twenty-one years' (1885-1905) average of 1·931 inches on 16·6 days. The maximum in the 20 years was 3·59 inches in 1888; the minimum was ·26 inch in 1893. The heaviest fall in 24 hours was ·37 inch on the 10th. At this station the total rainfall since January 1st was 8·91 inches on 57 days, compared with 6·50 inches on 47 days in the first quarter of 1905. Snow or sleet or hail was noticed on 9 days.

Mr. T. Bateman returns the rainfall at The Green, Malahide, Co. Dublin, at 1·071 inches on 15 days, compared with 3·473 inches on 24 days in 1905. The extremes of temperature in the shade were—highest, 59° on the 8th; lowest, 26° on the 12th; the mean temperature being 41·9°.

Mr. W. Miller registered 1·19 inches of rain at Wellesley Terrace, Cork, on 14 days. The greatest fall in 24 hours was 0·30 inch on the 10th. The rainfall was 1·27 inches in defect of the average for March. The rainfall of the first quarter of 1906 was 9·46 inches, or 0·44 inch less than the average.

The Rev. Arthur Wilson, M.A., writing from Dunmanway Rectory, Co. Cork, states that 3·145 inches of rain fell there in March, ·79 inch being measured on the 7th, ·84 inch on the 10th, and ·41 inch on the 14th. The rainfall for the first quarter of 1906 equals 17·340 inches.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 17 days to the total amount of 1·623 inches, the largest measurement being ·515 inch on the 10th. The duration of bright sunshine was 116·5 hours, of which 10·3 hours occurred on the 28th.

Printed image digitised by the University of Southampton Library Digitisation Unit

Dr. Byrne Powsr, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean tsmpsrature at that health resort was 44·5°, heing 0·5° ahove the average for March during 19 previous years (1873-83 and 1898-1905). The extremes were—highest 60° on the 16th, lowest 31·5° on the 3rd. At Bournemouth the mean was 42·3°, the extremes heing—highest 56° on the 7th, 8th, and 18th; lowest 27° on the 23rd. The average mean temperature at Kingstown during the past five winter months, November, Decomber, January, Fehruary, and March, was 43·8°, whereas that for the south coast of England, from Portland Bill to Dungeness, was 43·3°, that for Bournemouth heing as low as 41·8°. Now that the vernal equinox has passed, this relative condition of temperature is hecoming reversed as the summer solstice approaches, and from the last-named period the summer heat on the south coast of England hecomes great, and at times oppressive, especially so to invalids, while at Kingstown it will he comparatively mild. From a paper which appeared in the numher of this Journal for Decomher, 1903, and from snbeequent records, it can be stated that this relative condition of temperature has provailed during the past 8 years. The mean daily range of temperature at Kingstown was 9·9°; at Bournemouth it was 11·8°. The mean temperature of tho sea at Sandycove hathing-place was 42·6°, being 0·6° bclow the avarage for the month during the previous 8 years. The relative humidity was 76 per cont., heing the average for the month during the past 5 years. The rainfall at Kingstown was 1·50 inches on 15 days, being 0·5 inch helow the average for the month during 16 previous years (1873-83 and 1901-05). The greatest quantity measured in 24 hours was 0·50 inch on the 10th. The total duration of hright sunshine wae 137·3 hours, compared with 116·5 hours at tbe Ordnance Survey Office, Phœnix Park, only 106·2 hours at Valentia, 78·7 hours at Birr Castle, 148·8 hours at Southport, and 135·5 hours at St. Leonards.

April.—A cold month, rsmarkable for a deficiency of cloud and consequent large diurnal range of temperature, due to solar radiation hy day and terrestrial radiation by night. Up to the 16th tha rainfall was infrequsnt and scanty—from that day to thc clese copious showers fell, hut the precipitation was chiefly in the form of hail—especially sevsre hail-storms were experienced on the 24th, 28th, 29th, and 30th. Thunder was reported as heard at 5 p.m. of the 12th. The percentage of cloud at 9 a.m. was 55·0, and at 9 p.m. only 41·7, the mean heing 48·4. Bright sunshine was estimated at 196·5 hours against only 107·75 hours in April, 1905. The daily averags duration of sunshine was 6·6 hours. The planets Venus and Jupiter were well seen in the western evening sky towards the close of the month.

In Duhlin the arithmetical mean temperature (45·9°) was 1·7° below the average (47·6°). The mean dry-hulb readings at 9 a.m. and 9 p.m. were 45·3°. In the forty-two years ending with 1906, April was coldest in 1879 (the cold year) (M. T. = 44·5°), and warmest in 1893 (M. T. = 51·4°).

The mean height of the harometer was 30·104 inches, or 0·254 inch ahove the average value for April—namely, 29·850 inches. The mercury rose to 30·700 inches at 9 a.m. of the 9th, and fell to 29·105 inches at 3 p.m. of the 29th. The ohserved range of atmoepheric pressure was, therefore, 1·595 inches.

The mean temperature deduced from daily readings of the dry-hnlb thermometer at 9 a.m. and 9 p.m. was 45·3°, or 2·0° ahove the value for March, 1906. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·476, the value is 45·5°, or or 1·8° helow the average mean temperature for April, calculated in the same way, in the thirty years, 1871-1900 inclusivo (47·3°). The arithmetical mean of the maximal and minimal readings was 45·9°, compared with a thirty years' (1871-1900 inclusive) average of 47·6°. On the 12th the thermometer in the screen rose to 63·5°—wind, S.E.; on the 19th the temperatura fell to 32·0°—wind, W. The minimum on the grass was 27·7° on tho 14th.

The rainfall was 1·829 inches, distributed over 18 days. The average rainfall for April in the thirty-five years, 1866-1900, inclusive, was 1·950 inches, and the average numher of rainy days was 15. The rainfall, thersfore, was slightly helow the average, while the number of rainy daye much exceeded it. In 1877 ths rainfall in April was very large—4·707 inches on 21 days. On the other hand, in 1873, only ·498 inch was measured on 8 days. In 1905, 2·466 inches fell on 25 daye, and in 1904, 1·118 inches on 19 days.

Fog was ohserved on the 2nd, 6th, 10th, 11th, and 12th. High winds were noted on 7 days, hut never reached the force of a gale. Hail fell on the 17th, 18th, 22nd, 23rd, 24th, 26th, 28th, 29th, and 30th; snow and sleet on the 28th. The temperature rose above 60° in the screen on 3 days. It failed to reach 50° on seven days. It fell to 32° in the screen on the 19th, and on sixteon nights it fell to or below 32° on ths grass. The mean lowest temperature on the grass was 33·6°, compared with 37·3° in 1905, 39·1° in 1904, 37·0° in 1903, 36·8° in 1902, 37·3° in 1901, 39·0° in 1900, and only 31·6° in 1887.

The rainfall in Dubhn during the four months ending April 30th amounted to 9·120 inches on 77 days, compared with 7·844 inches on 71 days in 1905, 9·056 inches on 74 daye in 1904, 10·176 inches on 78 days in 1903, 7·175 inches on 59 daye in 1902, 6·520 inches on 58 days in 1901, only 3·203 inches on 46 days in 1891, and a thirty-five years' average of 8·120 inches on 65 days.

At the Normal Climatological Station in Trinity College, Dublin, the observers, Mr. Thomas H. Hill, Sch., and Mr. Arthur R. Moore, B.A., return the mean height of the barometer as 30·104 inches, the highest reading obsarved being 30·704 inches at 9 a.m. of the 9th, the lowest, 29·146 inches at 9 a.m. of the 29th. The mean temperature was 45·4°, the mean dry-hulb reading at 9 a.m. and 9 p.m. being 45·6°. Rain fell on 17 days to the amount of 1·679 inches, ·590 inch heing measured on the 29th. The number of hours of bright sunshine registered hy the Camphell-Stokes sunshine recorder was 182·0, giving a daily average of 6·1 hours. The corresponding figures for April, 1904, were 168 hours and 5·6 hours, and for April, 1905, 105 hours and 3·5 houre. The highest temperatnre in the shade was 62·6° on the 16th, the lowest was 30·1° on tLe 2nd. The

Pnnted image digitised by the University of Southampton Library Digitisation Unit

highest reading of the black bulb *in vacuo* thermometer (solar radiation) was 120·5° on the 16th. The lowest temperature on the grass (terrestrial radiation) was 21·4° on the 2nd. The mean earth temperatures at 9 a.m. were—at a depth of one foot, 45·9°; at a depth of 4 feet also 45·9°.

Dr. B. H. Steede returns the rainfall at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, as 1·673 inches on 13 days, the maximal falls in 24 hours being ·440 inch on the 24th, and ·391 inch on the 29th. Since January 1st, 1906, the rainfall at this station amounts to 10·273 inches on 69 days. The thermometers in the screen rose to 62·5° on the 7th, having fallen to 32·3° on the 2nd.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall amounted to 1·755 inches on 9 days, compared with 2·835 inches on 18 days in 1905, only ·930 inch on 14 days in 1904, 1·165 inches on 9 days in 1903, 3·105 inches on 14 days in 1902, and 2·800 inches on 15 days in 1901. The heaviest fall in 24 hours was ·520 inch on the 21st. The total rainfall in 1906, up to April 30th, was 9·420 inches on 50 days, compared with 8·495 inches on 59 days in 1905, 9·037 inches on 68 days in 1904, 12·385 inches on 63 days in 1903, 9·215 inches on 48 days in 1902, 10·060 inches on 56 days in 1901, and only 5·686 inches on 50 days in 1896.

According to Mr. Robert O'Brien Furlong, C.B., at Cloneevin, Killiney, Co. Dublin, 1·62 inches of rain fell on 16 days. The maximal fall in 24 hours was ·55 inch on the 24th. Hail, snow, or sleet fell on the 17th, 18th, 28th, 29th, and 30th. The average rainfall in April of the twenty-one years, 1885-1905, was 1·816 inches on 14·7 days. Since January 1st, 1906, 8·53 inches of rain fell at this station on 73 days, compared with 9·17 inches on 69 days in 1905, 9·02 inches on 69 days in 1904, 9·67 inches on 76 days in 1903, 8·08 inches on 59 days in 1902, and 7·62 inches on 59 days in 1901.

Dr. Arthur S. Goff reports that the rainfall at Lynton, Dundrum, Co. Dublin, was 1·68 inches on 17 days, compared with 3·14 inches on 24 days in 1905, 1·48 inches on 18 days in 1904, 1·35 inches on 16 days in 1903, 2·63 inches on 16 days in 1902, and 1·19 inches on 12 days in 1901. The greatest daily rainfall was ·41 inch on the 24th. The mean shade temperature was 45·4°, compared with 48·3° in 1901, 46·6° in 1902, 45·9° in 1903, 48·9° in 1904, and 46·4° in 1905. The thermometric range was from 60° on the 7th, 12th, and 16th to 34° on the 2nd, 10th, and 19th. Hail fell on the 17th, 22nd, 23rd, 27th, 28th, and 30th.

Mr. T. Bateman, of The Green, Malahide, Co. Dublin, returns the rainfall at 1·336 inches on 13 days, compared with 1·773 inches on 22 days in April, 1905. The greatest fall in 24 hours was ·375 inch on the 24th. The shade mean temperature was 43·6° against 44·8° in 1905, the extremes being—highest, 60° on the 12th; lowest, 27° on the 18th.

In Cork, according to Mr. W. Miller, the rainfall amounted to 1·06 inches on 11 days, ·37 inch being measured on the 4th. Since January 1st, 1906, 10·52 inches of rain have fallen in Cork on 67 days, against an average for the first four months of the year of 12·78 inches on 68 days.

The Rev. Arthur Wilson, M.A., writes from the Rectory, Dunmanway, Co. Cork, to the effect that 1·62 inches of rain fell there on 12 days, the greatest falls in 24 hours being ·67 inch on the 4th, ·30 inch on the 28th, and ·20 inch on the 29th, on which day showers of hail and snow fell. From March 18th to April 20th only ·88 inch of rain fell on 7 days, and of this small amount ·67 inch was measured on the night of the 4th of April.

At 21 Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., measured 1·645 inches on 16 days, the largest amount recorded in 24 hours being ·490 inch on the 29th.

The rainfall recorded by Miss Muriel O'Sullivan at White Cross, Stillorgan, was 1·700 inches on 19 days, compared with 3·122 inches on 24 days in 1905. The maximum in 24 hours was ·440 inch on the 24th.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 18 days to the amount of 1·570 inches, the greatest measurement in 24 hours being ·375 inch on the 24th. The total amount of bright sunshine at this station was 203·1 hours, the most in one day being 12·7 hours on the 14th.

MAY.—Like May, 1905, this month was characterised by a prevalence of winds from Polar quarters. Only in the first and last weeks did an equatorial air current assert itself. The Polar winds were accompanied by much cloud and frequent rain or showers. The percentage of cloud was as high as 73·3. The estimated duration of bright sunshine was 127·75 hours, compared with 225 hours in 1905, 195·75 hours in 1904, 178·5 hours in 1903, 178·75 hours in 1902, and 302·25 hours in 1901. The daily mean duration of sunshine was 4·1 hours, compared with 7·3 hours in May, 1905.

In Dublin the arithmetical mean temperature (51·7°) was 0·4° below the average (52·1°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 50·9°. In the forty-two years ending with 1906, May was coldest in 1869 (M. T. = 48·2°), and warmest in 1893 (M. T. = 56·7°). In 1905 the M. T. was 54·0°.

The mean height of the barometer was 29·812 inches, or 0·177 inch below the corrected average value for May—namely, 29·989 inches. The mercury rose to 30·126 inches at 9 a.m. of the 14th, having fallen to 29·435 inches at 9 a.m. of the 2nd. The observed range of atmospheric pressure was, therefore, 0·691 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 50·9°, or 5·6° above the value for April, 1906—45·3°. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·47, the value is 51·3°, or 0·4° below the average mean temperature for May, calculated in the same way, in the thirty years, 1871-1900, inclusive (51·7°). The arithmetical mean of the maximal and minimal readings was 51·7°, compared with a thirty years' average of 52·1°. On the 28th the thermometer in the screen rose to 68·9°—wind, S.E.; on the 10th the temperature fell to 35·0°—wind, N. The minimum on the grass was 31·5°, also on the 10th.

Printed image digitised by the University of Southampton Library Digitisation Unit

The rainfall amounted to 2·472 inches, distributed over 20 days. The average rainfall for May in the thirty-five years, 1866-1900, inclusive, was 2·020 inches, and the average number of rainy days was 15. The rainfall and the rainy days were, therefore, both above the average. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869, also, 5·414 inches fell on 19 days. On the other hand, in 1895, only ·177 inch was measured on but 3 days. In 1896 the fall was only ·190 inch on 7 days. In 1905, 1·182 inches fell on 10 days.

A solar halo appeared on the 1st and again on the 12th. High winds were noted on 6 days, and attained the force of a gale on the 2nd and 17th. Hail fell on the 16th and 17th. There was a fog in the evening of the 26th.

During the month the thermometer did not fall below 32° in the screen, but on the 10th it fell to 31·5° on the grass. The mean minimal temperature on the grass was 41·9°, compared with 42·5° in 1905, 42·6° in 1904, 44·3° in 1903, 40·3° in 1902, 41·7° in 1901, 41·6° in 1900, 40·6° in 1899, 42·9° in 1898, 40·9° in 1897, 43·1° in 1896, 41·8° in 1895, and 37·6° in 1894. The maximum reached or exceeded 60° on 9 days, and fell short of 50° on 2 days. It never reached 70°.

The rainfall in Dublin during the five months ended May 31st amounted to 11·592 inches on 97 days, compared with 9·026 inches on 81 days in 1905, 11·741 inches on 92 days in 1904, 12·560 inches on 95 days in 1903, 9·973 inches on 81 days in 1902, 7·724 inches on 67 days in 1901, 9·921 inches on 92 days in 1900, 9·652 inches on 87 days in 1899, 10·568 inches on 84 days in 1898, 10·693 inches on 93 days in 1897, 5·971 inches on 70 days in 1896, and a thirty-five years' average of 10·140 inches on 80 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Thomas H. Hill, Sch., returns the mean height of the barometer as 29·813 inches, the highest reading observed being 30·124 inches at 9 a.m. of the 14th, the lowest, 29·438 inches at 9 a.m. of the 2nd. The arithmetical mean temperature was 50·9°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 50·8°. Rain fell on 19 days to the amount of 2·408 inches, ·486 inch being measured on the 19th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 132·5, giving a daily average of 4·3 hours. The corresponding figures for May, 1904, were 192·5 hours and 6·2 hours, and for 1905, 215·7 hours and 7·0 hours, respectively. The mean earth-temperature at 9 a.m. was 50·7° at a depth of one foot below the surface, 48·6° at 4 feet.

At Knockdolian, Greystones, Co. Wicklow, the rainfall, measured by Mr. R. Cathcart Dobbs, J.P., was 2·245 inches, distributed over 16 days—·495 inch falling on the 19th, and ·455 inch on the 23rd. The total fall since January 1st, 1906, equals 11·665 inches on 66 days, compared with 9·611 inches on 67 days in 1905, 12·027 inches on 84 days in 1904, 15·655 inches on 79 days in 1903, 11·750 inches on 68 days in 1902, 11·205 inches on 65 days in 1901, 16·381 inches on 84 days in 1900, and only 5·716 inches on 52 days in 1896.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, as 2·74 inches on 21 days, compared with 1·42 inches on 11 days in 1905, 2·46 inches on 18 days in 1904, 2·86 inches on 18 days in 1903, 3·26 inches on 22 days in 1902, and 1·09 inches on 10 days in 1901. The greatest daily measurement was ·62 inch on the 23rd. The temperature in the shade ranged from 66° on the 28th to 37° on the 1st. The mean temperature of the month was 51·8°, compared with 54·5° in 1905, 53·3° in 1904, 53·1° in 1903, 50·5° in 1902, and 52·6° in 1901. There were hail showers on the 16th and 17th.

According to Mr. Robert O'B. Furlong, C.B., the rainfall at Cloneevin, Killiney, was 2·55 inches on 20 days, compared with 1·83 inches on 9 days in 1905, 2·48 inches on 15 days in 1904, 2·54 inches on 15 days in 1903, 2·58 inches on 21 days in 1902, and 1·20 inches on 10 days in 1901. The maximal fall in 24 hours was ·46 inch on the 19th. The average rainfall in May at this station during the 21 years, 1885-1905, inclusive, was 2·09 inches on 13·5 days. Since January 1st, 1906, 11·08 inches of rain have fallen at Cloneevin on 93 days.

The rainfall recorded by Miss Muriel O'Sullivan at White Cross, Stillorgan, was 2·572 inches on 21 days, compared with 1·660 inches on 9 days in May, 1905. The maximum in 24 hours was ·601 inch on the 24th, but ·510 inch fell on the 19th.

At 21 Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., measured 2·360 inches on 19 days, the largest amount recorded in 24 hours being ·545 inch on the 19th.

Mr. T. Bateman, of The Green, Malahide, Co. Dublin, returns the rainfall at 3·174 inches on 19 days, compared with 1·283 inches on 10 days in 1905. The greatest fall in 24 hours was ·625 inch on the 19th. The mean shade temperature was 49·7°, the extremes being—highest, 69°; lowest, 32° on the 9th.

At Cork, Mr. Wm. Miller returns the rainfall at 3·08 inches on 17 days, or ·90 inch above the average. The greatest day's rainfall was ·57 inch on the 4th. Up to May 31st, the rainfall of 1906 in Cork amounted to 13·60 inches on 84 days, or 1·36 inches below the average.

The Rev. Arthur Wilson, M.A., writes from the Rectory, Dunmanway, Co. Cork, to the effect that 5·100 inches fell there on 23 days, the greatest fall in 24 hours being 0·95 inch on the 4th in 5 hours. Other heavy falls were ·48 inch on the 1st, and again on the 5th, ·51 inch on the 23rd, and ·58 inch on the 27th.

At the Ordnance Survey Office, Phœnix Park, Dublin, the rainfall was 2·545 inches on 22 days, the greatest measurement in 24 hours being ·620 inch on the 19th. The total amount of sunshine during the month was 138·1 hours, the largest daily record being 13·2 hours on the 7th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 50·3°, being 1·5° below the average for May during 19 previous years (1873-83, and 1898-1905); the extremes were—highest, 66° on the 28th; lowest, 36·5° on the 1st. At Bournemouth the mean was 52·0°, the extremes being—highest, 73° on the 8th; lowest, 34° on the 1st. The mean daily range was 10·5°, at Bournemouth it

Printed image digitised by the University of Southampton Library Digitisation Unit

was 13·0°. The mean temperature of the sea at Sandycove bathing place was 47·4°, being 2·2° below the average for the month during the previous 7 years. The average relative humidity was 79 per cent. The rainfall was 2·29 inches on 19 days, being 0·4 inch above the average for the month during 16 previous years (1873-83 and 1901-05). The greatest daily quantity measured was 0·47 inch on the 19th. The rainfall at Bournemouth was 2·8 inches on 17 days. The duration of bright sunshine was 142·3 hours, being 69·1 hours below the average for May during the previous 5 years. The total duration at Phœnix Park was 138·1 hours; at Valentia, 151·1 hours; at Birr Castle, 117·1 hours; at Southport, 104·3 hours; and at Hastings, 197·0 hours.

JUNE.—A fine month, with a high mean atmospheric pressure (30·129 inches), a marked prevalence of northerly or "polar" winds, and drought from the 2nd to the 15th. The second half of the month was showery, but otherwise favourable. It is noteworthy that the mean temperature was 1·6° above the average, notwithstanding the overwhelming preponderance of winds from polar quarters. By a strange coincidence the mean temperature was precisely the same as that of June, 1905, which was a beautiful and in all respects a favourable month. The mean amount of cloud was 62·3 per cent. at 9 a.m. and only 48·0 per cent. at 9 p.m., the general mean being 55·2 per cent. The estimated duration of bright sunshine was 220 hours, or a daily average of 7·3 hours. In 1905, the corresponding values were 237·5 hours and 7·9 hours.

In Dublin the arithmetical mean temperature (59·6°) was above the average (58·0°) by 1·6°; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 58·4°. In the forty-two years ending with 1906, June was coldest in 1882 (M. T. = 55·8°) and 1879 ("the cold year") (M. T. = 55·9°). It was warmest in 1887 (M. T. = 62·3°); in 1896 (M. T. = 61·4°); and in 1899 (M. T. = 61·3°). In 1905 the M. T. was 59·6°.

The mean height of the barometer was 30·129 inches, or 0·212 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·380 inches at 9 a.m. of the 4th, having fallen to 29·442 inches at 9 a.m. of the 1st. The observed range of atmospheric pressure was, therefore, 0·938 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 58·4°, or 7·5° above the corresponding M. T. for May, 1906. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·465, the value was 59·1°, or 1·6° above the average mean temperature for June, calculated in the same way, in the thirty years 1871-1900, inclusive (57·5°). The arithmetical mean of the maximal and minimal readings was 59·6°, compared with a thirty years' average of 58·0°. On the 21st the thermometer in the screen rose to 76·2°—wind, S.W.; on the 30th the temperature fell to 42·7°—wind, W.N.W. The minimum on the grass was 37·8° on the 30th.

The rainfall amounted to 1·049 inches on 12 days. The average rainfall for June in the thirty-five years, 1866-1900, inclusive, was 1·920 inches, and the average number of rainy days was 15. The rainfall, therefore, and also the rainy days were considerably below the average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879, also, 4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 inch was measured on 6 days. In 1887 the rainfall was only ·252 inch, distributed over 5 days. In 1905, 1·175 inches fell on 11 days.

High winds were noted on only 4 days, and reached the force of a gale on the 25th. Solar halos were seen on the 9th, 14th, 21st, 25th and 28th. Temperature reached or exceeded 70° in the screen on 10 days, compared with 7 days in 1905, 4 days in 1904, 2 days in 1903, only 1 day in 1901, and 8 days in 1902. Lightning was seen in the night of the 9th.

The rainfall in Dublin during the six months ending June 30th amounted to 12·641 inches on 109 days, compared with 10·201 inches on 92 days in 1905, 12·817 inches on 102 days in 1904, 15·054 inches on 108 days in 1903 12·344 inches on 98 days in 1902, 9·352 inches on 80 days in 1901, 13·090 inches on 114 days in 1900, 11·295 inches on 95 days in 1899, 12·115 inches on 98 days in 1898, 13·950 inches on 113 days in 1897, 7·354 inches on 84 days in 1896, only 6·741 inches on 67 days in 1887, and a thirty-five years' average of 12·060 inches on 95 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Thomas H. Hill, Sc.D., returns the mean height of the barometer as 30·133 inches, the highest reading observed being 30·380 inches at 9 a.m. of the 4th, the lowest, 29·443 inches at 9 a.m. of the 1st. The arithmetical mean temperature was 58·2°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being also 58·2°. The thermometer rose to 76·8° in the shade on the 21st, and fell to 42·0° on the 30th, when the grass minimum was 38·8°. Rain fell on 12 days to the amount of 1·004 inches, ·139 inch being measured on the 15th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 210·3, giving a daily average of 7·0 hours. The corresponding figures for June, 1905, were 217·6 hours and 7·3 hours. The mean earth temperature read at 9 a.m. was 58·1° at a depth of 1 foot below the surface of the ground, 53·9° at a depth of 4 feet.

Dr. B. H. Steede recorded a rainfall of ·861 inch on 12 days at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow. On the 23rd the measurement was ·310 inch. The total rainfall in 1906 up to June 30th was 14·397 inches on 100 days. As regards temperature, the thermometer in the shade rose to 75·6° on the 21st, and fell to 41·0° on the 30th.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was ·870 inch on 7 days, compared with 3·341 inches on 16 days in 1902, 1·785 inches on 11 days in 1903, 2·280 inches on 10 days in 1904, and 1·500 inches on 10 days in 1905. The heaviest rainfall in 24 hours was ·380 inch on the 23rd. The total fall since January 1st has been 12·535 inches on 73 days, compared with 11·111 inches on 77 days in 1905, 14·307 inches on 94 days in 1904, 17·440 inches on 90 days in 1903, 15·091 inches on 84 days in 1902, 13·670 inches on 75 days in 1901, 18·191 inches on 105 days in 1900, 19·510 inches on 95 days in 1899, 13·500 inches on 88 days in 1898, 18·125 inches on 106 days in 1897, and 7·356 inches on 61 days in 1896.

Printed image digitised by the University of Southampton Library Digitisation Unit

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, as 1·26 inches on 15 days, compared with 1·51 inches on 12 days in 1905, 1·22 inches on 14 days in 1904, 1·54 inches on 12 days in 1903, 3·08 inches on 19 days in 1902, and 1·71 inches on 13 days in 1901. The greatest daily fall was ·21 inch on the 28th. The mean shade temperature was 60·4°. The thermometric range was from 77° on the 21st to 46° on the 29th and 30th.

The rainfall recorded at Cloneevin, Killiney, Co. Dublin, by Mr. R. O'B. Furlong, C.B., was ·87 inch on 11 days, compared with 1·56 inches on 11 days in 1905. The maximal fall in 24 hours was ·28 inch on the 23rd. The average rainfall in June in the 21 years (1885-1905) was 1·79 inches on 13·0 days. The total fall at Cloneevin since January 1st, 1906, amounts to 11·95 inches on 104 days, compared with 12·56 inches on 89 days in the first six months of 1905.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, was 1·77 inches on 12 days, compared with 1·41 inches on 10 days in 1905. The heaviest fall in 24 hours was ·45 inch on the 21st. The mean shade temperature was 57·4°, the extremes being—highest, 75°; lowest, 39°.

Dr. C. Joynt returns the rainfall at 21 Leeson Park, Dublin, as 1·410 inches on 12 days, ·350 inch having been recorded on the 21st.

At White Cross, Stillorgan, Co. Dublin, Miss Muriel O'Sullivan registered a rainfall of 1·002 inches on 11 days—the largest measurement in 24 hours being ·175 inch on the 15th.

The Rev. Arthur Wilson, M.A., reports a rainfall of 3·165 inches on 14 days at the Rectory, Dunmanway, Co. Cork. The first 15 days were very dry and warm, with a scanty rainfall—only ·135 inch on 2 days. On the 17th ·59 inch was measured; on the 30th ·47 inch, and on the 26th ·43 inch. The rainfall for the first six months of 1906 at Dunmanway was 27·225 inches.

Mr. W. Miller returns the rainfall at Cork as 1·62 inches on 11 days—this amount falling short of the average for June by 1·17 inches. The greatest rainfall in 24 hours was ·27 inch on the 26th. The rainfall of the first six months of 1906 in Cork was 15·22 inches, or 2·53 inches below the average.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell in June on 14 days to the total amount of 1·545 inches, ·300 inch being registered on the 21st. The duration of bright sunshine was 203·7 hours, the most in one day being 13·7 hours on the 12th. On the 8th, the record was 13·6 hours.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 57·6°, being 0·6° above the average for June during 19 previous years (1873-83 and 1898-1905), the extremes being—highest, 75·5° on the 21st; lowest, 44·5° on the 5th, 29th, and 30th. At Bournemouth the mean was 57·8°; the extremes being—highest, 76° on the 23rd; lowest, 43° on the 6th. The mean daily range was 11·5°, at Bournemouth it was 16·5°. The mean temperature of the sea at Sandycove bathing-place was 53·4°, being 1·6° below the average for the month during the previous 8 years. The average relative humidity was 76 per cent., being 1 per cent. above the average for the month during the previous 5 years. The rainfall was 0·90 inch on 14 days, being 1·05 inches below the average for the month during 16 previous years (1873-83 and 1901-05). At Bournemouth the rainfall was 0·83 inch on 6 days. The duration of bright sunshine was 226 hours, being 42·3 hours above the average for the month during the previous 5 years. The corresponding figures were 203·7 hours at the Ordnance office, Phœnix Park, 216·7 hours at Southport, and 270·5 hours at Bournemouth.

JULY.—A favourable month of westerly winds, often cloudy skies, and frequent but not heavy showers. More than a quarter of the total rainfall for the month (1·023 inches) fell on the 1st (·282 inch), which was a cold, dull, wet day—the only inclement day of the whole month. The mean temperature was 60·7°, or corrected 60·2°. Once only, on the 1st, did the thermometer fail to reach 60° in the screen—on that day the maximum was 59·8°. On 10 days the temperature touched or exceeded 70° in the screen, the highest reading of all being 76·5° on the 22nd. The mean amount of cloud was 65·2 per cent.; at 9 a.m. it was 73·2 per cent., at 9 p.m. only 57·1 per cent. The duration of bright sunshine was estimated at 201·5 hours, or a daily average of 6·5 hours. On the 4th the sun shone for some 15 hours.

In Dublin the arithmetical mean temperature (60·7°) was 0·4° above the average of the 30 years 1871-1900 (60·3°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 59·8°. In the forty-two years ending with 1906, July was coldest in 1879 ("the cold year") (M. T.=57·2°). It was warmest in 1905 (M. T.=63·8°); 1887 (M. T.=63·7°); in 1868 ("the warm year") and in 1901 (M. T.=63·5°). In 1900 the M. T. was 63·4°.

The mean height of the barometer was 29·991 inches, or 0·076 inch above the corrected average value for July—namely, 29·915 inches. The mercury rose to 30·329 inches at 9 a.m. of the 9th, and fell to 29·601 inches at 8 p.m. of the 18th. The observed range of atmospheric pressure was, therefore, ·728 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 59·8°, or 1·4° above the value for June, 1906. Using the formula, *Mean Temp.=Min.+(Max.—Min.)* × ·465, the value was 60·2°, or 0·4° above the average mean temperature for July, calculated in the same way, in the thirty years 1871-1900 inclusive (59·8°). The arithmetical mean of the maximal and minimal readings was 60·7°, compared with a thirty years' average of 60·3°. On the 22nd the thermometer in the screen rose to 76·5°—wind, W.; on the 4th the temperature fell to 47·4°—wind, N.E. The minimum on the grass was 42·7°, also on the 4th.

The rainfall was 1·023 inches, distributed over 13 days. The average rainfall for July in the thirty-five years 1866-1900, inclusive, was 2·560 inches, and the average number of rainy days was 18. The rainfall, therefore, and the rainy days were much below the average. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1896, also, 5·474 inches fell on 18 days. On

Pnnted image digitised by the University of Southampton Library Digitisation Unit

the other hand, in 1870, only 539 inch was measured on 8 days; in 1869, the fall was only ·739 inch on 9 days; and in 1868, ·741 inch fell on but 5 days. In 1905 only ·821 inch fell on, however, as many as 17 days.

High winds were noted on 10 days, and attained the force of a gale on the 15th and 18th. Temperature reached or exceeded 70° in the screen on 10 days, compared with 17 days in 1905, 9 days in 1904, and 7 days in both 1902 and 1903. The thermometer failed to reach 60° on the 1st, when the maximum was 59·8°. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In 1888 the maximum for July was only 68·7°.

Solar halos were seen on the 12th, 24th and 25th. A flash of lightning was seen on the night of the 28th.

The rainfall in Dublin during the seven months ending July 31st amounted to 13·664 inches on 122 days, compared with 11·022 inches on 109 days in 1905, 13·905 inches on 117 days in 1904, 19·072 inches on 131 days in 1903, 15·507 inches on 115 days in 1902, 11·432 inches on 93 days in 1901, 17·609 inches on 129 days in 1900, 14·416 inches on 107 days in 1899, 13·060 inches on 106 days in 1898, 15·600 inches on 125 days in 1897, 7·935 inches on 80 days in 1887, and a thirty-five years' average of 14·620 inches on 113 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. Thomas H. Hill, Sch., reports that the mean height of the barometer was 29·995 inches, the range of atmospheric pressure being from 30·338 inches at 9 a.m. of the 9th to 29·633 inches at 9 p.m. of the 18th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 59·9°. The arithmetical mean of the daily maximal and minimal temperatures was also 59·9°. The screened thermometers rose to 76·8° on the 22nd, and fell to 45·9°on the 4th. On the 4th also the grass minimum was 39·2°. On the 31st the black bulb *in vacuo* rose to 133·2°. Rain fell on 12 days to the amount of ·949 inch, the greatest fall in 24 hours being ·245 inch on the 1st. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 184·8 hours, of which 13·1 occurred on the 4th. In July, 1904, there were 201 hours of bright sunshine, and in July, 1905, 162·2 hours. The mean earth temperatures were—at 1 ft., 59·9°; at 4 ft., 56·5°. The one-foot thermometer ranged between 57·3° on the 2nd and 3rd and 82·5° on the 23rd. The four-feet thermometer ranged from 55·6° on the 5th to 57·6° on the 31st.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, County Dublin, the rainfall was 1·25 inches on 18 days. The maximal fall in 24 hours was ·36 inch, measured on the 1st. The mean temperature was 62·3°, the range being from 79° on the 6th to 43° on the 4th. In July, 1901, 2·65 inches of rain fell at this station on 11 days; in 1902, 4·27 inches on 91 days; in 1903, 3·66 inches on 24 days; in 1904, 1·22 inches on 17 days, and in 1905, ·98 inch on 20 days.

At White Cross, Stillorgan, Miss Muriel E. O'Sullivan measured 1·003 inches of rain on 15 days, the largest amount which fell in 24 hours being ·200 inch on the 1st.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'Brien Furlong, C.B., reports that the rainfall in July was ·97 inch on 14 days, compared with a twenty-one years' (1885-1905) average of 2·504 inches on 15·2 days. On the 12th the rainfall was ·26 inch, and ·23 inch fell on the 1st; the amount for the remaining 29 days was only ·48 inch. In July, 1905, 1·03 inches fell on 15 days; in 1904, only ·77 inch on 15 days, in 1903, 3·54 inches on 19 days; in 1902, 3·64 inches on 13 days; in 1901, 2·80 inches on 13 days; in 1900, 4·56 inches on 16 days; in 1899, 3·48 inches on 17 days; in 1898, ·84 inch on 7 days; in 1897, 1·28 inches on 10 days; in 1896, 6·72 inches on 20 days. Since January 1st, 1906, 12·92 inches of rain have fallen on 118 days at this station, compared with 18·38 inches on 129 days in the corresponding 7 months of 1900, 13·54 inches on 95 days in 1901, 16·90 inches on 111 days in 1902, 17·39 inches on 122 days in 1903, 13·69 inches on 110 days in 1904, and 13·59 inches on 104 days in 1905. The lowest July fall was ·70 inch on 9 days in 1885; the highest, 6·72 inches on 20 days in 1896.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·112 inches on 15 days. The largest daily fall was ·225 inch on the 12th. The total rainfall for the first 7 months of 1906 was 13·000 inches on 114 days, compared with 10·68 inches on 111 days in 1905. The mean shade temperature was 59·8°, the extremes being—highest, 74° on the 22nd; lowest, 41·0° on the 4th.

At the Ordnance Survey Office, Phœnix Park, rain fell on 13 days to the amount of 1·230 inches, the greatest rainfall in 24 hours being ·305 inch on the 1st. The total duration of bright sunshine was 184·7 hours, the longest daily sunshine being 14·7 hours on the 4th.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 1·095 inches on 13 days, compared with 1·932 inches on 11 days in 1905, 1·395 inches on 15 days in 1904, 2·790 inches on 17 days in 1903, 4·550 inches on 11 days in 1902, 2·390 inches on 10 days in 1901, 5·140 inches on 15 days in 1900, 3·480 inches on 14 days in 1899, 1·145 inches on 6 days in 1898, 1·625 inches on 10 days in 1897, and 5·726 inches on 16 days in 1896. Of the total rainfall ·280 inch fell on the 1st. The total fall since January 1st, has been 13·630 inches on 86 days, compared with 13·043 inches on 88 days in 1905, 15·702 inches on 109 days in 1904, 20·230 inches on 107 days in 1903, 19·641 inches on 95 days in 1902, 16·060 inches on 85 days in 1901, 23·331 inches on 120 days in 1900, 22·990 inches on 109 days in 1899, 14·645 inches on 94 days in 1898, and 19·750 inches on 116 days in 1897.

According to Mr. W. Miller, the rainfall in Cork City was 3·27 inches, or 0·82 inch more than the average, and the rainy days were 15. The greatest fall was ·76 inch on the 27th, while ·74 inch fell on the 26th. The mean temperature of the month was 59·0°, or 1·0° below the average for July. The thermometer rose to 74·5° on the 22nd and fell to 44·0° on the 9th. The rainfall for 1906 up to July 31st was 18·49 inches on 110 days, compared with averages of 20·20 inches and 108 days respectively.

Printed image digitised by the University of Southampton Library Digitisation Unit

The Rev. Arthur Wilson, M.A., reports a rainfall of 4·150 inches at Dunmanway Rectory, Co. Cork. The heaviest falls in 24 hours were—·90 inch on the 31st, ·87 inch on the 27th, and ·77 inch on the 30th. On the last-named day there were very heavy showers and a storm. The first fortnight was very fine. The month as a whole was cool.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 59·9°, being 0·8° above the average for July during 19 previous years (1873-83 and 1898-1905), the extremes being—highest, 77·5° on the 22nd; lowest, 47° on the 4th and 5th. At Bournemouth the mean was 61·8°, the extremes being—highest, 77° on the 27th; lowest, 47° on the 13th. The mean daily range was 12·9°; at Bournemouth it was 16·3°. The mean temperature of the sea at Sandycove bathing-place was 56·9°, being 1·4° below the average for the month during the previous 5 years. The average relative humidity was 72 per cent. The rainfall was 0·94 inch on 14 days, being 1·71 inches below the averages for July during 16 previous years. At Bournemouth it was 1·35 inches on 9 days. The total duration of bright sunshine was 192·6 hours, being 17·1 hours above the average for the month during the previous 5 years, compared with 184·7 hours at the Ordnance Survey Office, Phœnix Park, and 252·2 hours at Bournemouth. On the 4th the duration was 15·7 hours at Kingstown.

August.—A warm, generally favourable month—yet with as many as 17 rain-days in Dublin, although the total rainfall was only 1·761 inches, or 58 per cent. of the average. In the North of England, Scotland, and the Irish provinces, with the exception of Leinster, the rainfall of the month was heavy and frequent; whereas in the south and south-east of England dry weather prevailed—particularly in the London district, where the rainfall was only ·82 inch on 7 days (in St. James's Park, Westminster). A cold period, with fresh N.W. winds, occurred from the 15th to the 18th inclusive, but the last week was remarkable for its dryness and warmth. On the 31st the thermometer rose in the shade to 77·0° at Fitzwilliam Square, Dublin, 80·0° in Trinity College, Dublin, 80·5° at the Royal Botanic Gardens, Glasnevin, 84·8° at the Ordnance Survey, Phœnix Park, and 80·0° at Birr Castle, King's Co. In Great Britain even higher temperatures were recorded—85° at Leith and Harrogate, 86° at Folkstone, 87° at Bettws-y-Coed, 88° at Bath and Manchester, 89° at Birmingham, 90° at Oxford, 91° in London and at Margate, 91·5° at Ross (Herefordshire), 92° at Hillington (Norfolk), and 93° at Nottingham.

The duration of bright sunshine was estimated at 197·5 hours, or a daily average of 6·4 hours.

In Dublin the arithmetical mean temperature (63·2°) was much above the average (59·7°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 61·1°. In the forty-two years ending with 1906, August was coldest in 1881 (M. T. = 57·0°), and warmest in 1899 (M. T. = 63·4°).

The mean height of the barometer was 29·915 inches, or 0·018 inch above the corrected average value for August—namely, 29·897 inches. The mercury rose to 30·350 inches at 9 a.m. of the 28th, and fell to 29·421 inches at 9 a.m. of the 13th. The observed range of atmospheric pressure was, therefore, ·929 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 61·1°. It was 1·3° above the value for July, 1906. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·47, the mean temperature was 62·8°, or 3·5° above the average mean temperature for August, calculated in the same way, in the thirty years 1871-1900, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 63·2°, compared with a thirty years' average of 59·7°. On the 31st, the thermometer in the screen rose to 77·0°—wind, E. to calm; on the 19th the temperature fell to 49·1°—wind, W.N.W. A like reading occurred on the 30th—wind, E. The minimum on the grass was 43·3° on the 30th.

The rainfall was 1·761 inches on 17 days. The average rainfall for August in the thirty-five years 1866-1900, inclusive, was 3·040 inches, and the average number of rainy days was 17. The rainfall, therefore, was little more than half the average, while the rainy days were equal to the average. In 1900 the rainfall in August was very large—5·871 inches on 17 days; in 1889, also, 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. In 1904, 2·903 inches fell on 18 days. August, 1905, established a record for rainfall in this month in Dublin, for the measurement was 7·019 inches on 22 days, 3·436 inches having fallen on the 25th.

High winds were noted on 11 days, but attained the force of a gale on only one day—the 25th, and then only for a short time. Temperature reached 70° in the screen on 17 days, compared with 18 days in August, 1899, 6 in 1900, 7 in 1901, only one day in both 1902 and 1903, 9 days in 1904, and one day in 1905. Thunderstorms occurred on the 3rd and 16th. Solar halos were seen on the 8th, 9th, 19th and 24th. Hail fell in the thunderstorm on the 3rd. There was fog on the 23rd, 29th, and 31st.

The rainfall in Dublin during the eight months ending August 31st amounted to 15·425 inches on 139 days, compared with 18·041 inches on 131 days in 1905, 16·808 inches on 135 days in 1904, 21·872 inches on 157 days in 1903, 18·456 inches on 133 days in 1902, 14·384 inches on 106 days in 1901, 9·455 inches on 96 days during the same period in 1887, and a thirty-five years' average of 17·660 inches on 130 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·918 inches, the range of atmospheric pressure being from 30·356 inches at 9 a.m. of the 28th to 29·424 inches at 9 a.m. of the 13th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 61·5°. The arithmetical mean of the daily maximal and minimal temperatures was 62·4°. The screened thermometers rose to 80·0° on the 31st, having fallen to 41·7° on the 30th. On the latter day the grass minimum was 39·4°. On the 4th the black bulb *in vacuo* rose to 130·9°. Rain fell on 16 days to the amount of 1·568 inches, the greatest fall in 24 hours being ·339 inch on the 24th. The duration of bright sunshine, according to

Printed image digitised by the University of Southampton Library Digitisation Unit

the Camphell-Stokes recorder, was 176·9 hours, of which 11·0 hours occurred on the 30th, 10·2 hours on the 22nd, and 10·1 hours on the 31st. In August, 1904, there were 183·75 hours of hright sunshine, and in 1905, 121·9 hours. The mean earth-temperatures were—at 1 ft., 81·9°; at 4 ft., 58·4°. The one-foot thermometer ranged hetween 59·0° on the 19th and 63·8° on the 22nd. The four-feet thermometer ranged from 57·8° on the 1st to 59·1° on the 31st.

Dr. Christopher Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park at 1·635 inches, of which ·350 inch fell on the 3rd, ·290 inch on the 8th, and ·255 inch on the 24th. The rainy days were 14.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, County Duhlin, the rainfall was 1·48 inches on 15 days. The maximal fall in 24 hours was ·34 inch on the 3rd. The corresponding figures for 1901 were 3·11 inches on 16 days, for 1902, 2·73 inches on 18 days, for 1903, 2·78 inches on 25 daye, for 1904, ·98 inch on 20 days, and for 1905, 9·35 inches on 21 days. The mean shade temperature was 63·6°, the range being from 50° on the 30th to 78° on the 31st. Thunder and lightning occurred on the 3rd. In August, 1901, the M. T. was 60·5°, in 1902, it was 58·7°, in 1903, 58·6°, in 1904, 60·5°, and in 1905, 59·1°.

At White Cross, Stillorgan, Miss Muriel E. O'Sullivan measured 1·535 inches of rain on 15 days, the largest amount which fell in 24 hours heing ·340 inch on the 3rd.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Duhlin, was 2·369 inches on 17 days; the heaviest fall in 24 hours was ·552 inch on the 23rd. In August, 1905, 7·181 inches fell on 21 days, the greatest fall in 24 hours being 3·110 inches on the 25th. The mean shade temperature was 61·3°, the extremes heing—highest, 76·0° on the 20th; lowest, 45·0° on the 18th.

According to Mr. R. Cathcart Dohbs, J.P., at Knockdolian, Greystones, Co. Wicklow, the rainfall for Angust was 1·765 inches on 13 days, compared with 8·915 inches on 22 days in 1905, 2·875 inches on 20 days in 1904, 2·870 inches on 27 days in 1903, 3·520 inches on 16 days in 1902, and 3·625 inches on 15 days in 1901. The heaviest fall in 24 hours was ·400 inch on the 24th. The total fall since January 1st amounts to 15·455 inches on 99 days, compared with 21·058 inches on 110 days in 1905, 18·577 inches on 129 days in 1904, 23·100 inches on 134 days in 1903, 23·161 inches on 111 days in 1902, and 19·685 inches on 100 days in 1901.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 3·715 inches on 21 days. The largest measurements in 24 hours were ·86 inch on the 24th, and ·76 inch on the 1st. The rainfall of the first 8 months of 1906 equals 35·090 inches.

According to Mr. W. Miller, the rainfall in Cork City was 1·47 inches, or 2·02 inches less than the average, and the rainy days were 11. The greatest fall was ·43 inch on the 24th. The mean temperature of the month was 59·8°, or 0·2° above the average. The thermometer rose to 73° on the 20th and fell to 44·5° on the 13th. The rainfall for 1906 up to August 31st was 19·99 inches on 116 days, compared with averages of 23·69 inches and 123 days respectively.

At the Ordnance Survey Office, Phœnix Park, Duhlin, rain fell on 16 days to the amount of 1·882 inches, the greatest measurement in 24 hours being ·415 inch on the 24th. The total amount of sunshine was 182·4 hours, the most on one day heing 13·1 hours on the 30th. The thermometer rose to 84·8° in the shade on the 31st, having fallen to 39·4° on the 30th.

Dr. J. Byrne Power, D.P.H., F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 62·1°, being 1·9° ahove the average for August during 19 previous years (1873-83 and 1898-1905). The extremes were—highest, 77°, on the 31st; lowest, 47·5°, on the 19th. At Bournemouth the mean was 63·6°, the extremes heing—highest, 82°, on the 30th; lowest, 48°, on the 29th. The mean daily range was 12·9°, at Bournemouth it was 15·9°, the extreme range was very considerable at hoth stations, heing 23·5° on the 31st at Kingstown, and 31° on the 30th at Bournemouth. It may also he noted that it was 30·5° on the 30th at the Ordnance Survey Office, Phœnix Park, within 3 miles of the coast. The mean temperature of the sea at Sandycove bathing-place was 57·5°, and 1·2° helow the average for the month during the previous 8 years. The relativs humidity was 73 per cent., heing 1·2 per cent. helow the average for the month during the previous 5 years. The rainfall was 1·69 inches on 15 days, and 1·4 inches below the average during 16 previous years (1873-83 and 1898-1905), at Bournemouth it was 0·59 inch on 12 days. The total duration of hright sunshine was 198·3 hours, heing 33·7 honrs above the average for the month during the previous 5 years, as compared with 182·4 hours in the Phœnix Park, 206·2 hours at Southport, and 227 hours at Bournemouth.

September.—Not since the year 1865 has there heen so fine, warm, and dry a Septemher. This month was also warm, dry and summerlike in 1898, recalling memories of the wonderful September of 1865, when the mean temperature in Duhlin reached 61·4°, and the rainfall was only ·056 inch on 3 daye. The month opened with torrid heat in England—on the 1st, the thermometer rose to 91° in London and at Manchester, 92° at Oxford, 93° at Nottingham, and 95° at Oundle, Northamptonshire; on the 2nd, the highest temperatures were 91° in London, 92° at Oxford and Hillington, 94° at Canterhury and Nottingham, and 96° at Bawtry, Northamptonshire. In Ireland also very unusual warmth for the time of year was felt at the heginning of the month; in Trinity Collsge, Duhlin, ths thermometer rose to 79·4° on ths 1st, and to 80·5° on the 2nd. Another striking feature was the persistent anti-cyclone of the second half of the month and the ahsolute drought which lasted from the afternoon of the 15th till 2 a.m. of the 1st of Octoher.

In Duhlin the arithmetical mean temperature (57·1°) was 1·2° ahove the average (55·9°); the mean dry-hulh readinge at 9 a.m. and 9 p.m. were 55·7°. In the forty-two years ending with 1906, Septemher was coldest in 1886 and 1892 (M. T. = 53·0°), and warmest in 1865 (M. T. = 61·4°) and 1898 (M. T. = 60·2°). In 1905 the M. T. was 54·9°.

Pnnted image digitised by the University of Southampton Library Digitisation Unit

The mean height of the barometer was 30·201 inches, or 0·291 inch above the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·602 inches at 9 a.m. of the 27th, having fallen to 29·464 inches at 11 p.m. of the 14th. The observed range of atmospheric pressure was, therefore, 1·138 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 55·7°, or 5·4° below the value for August, 1906. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × 476, the mean temperature was56·7°, or 1·1° above the average mean temperature for September, calculated in the same way, in the thirty years, 1871-1900, inclusive (55·6°). The arithmetical mean of the maximal and minimal readings was 57·1°, compared with a thirty years' average of 55·9°. On the 2nd the thermometer in the screen rose to 77·8°—wind, W.; on the 26th the temperature fell to 41·0°—wind, calm. The minimum on the grass was 37·1° on the 28th.

The rainfall was ·696 inch on 7 days. The average rainfall for September in the thirty-five years, 1866-1900, inclusive, was 2·220 inches, and the average number of rainy days was 15. In 1871 the rainfall was very large—4·048 inches on, however, only 13 days; in 1896 no less than 5·073 inches fell on 23 days, establishing a record rainfall for September. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1905, 1·225 inches fell on 14 days.

High winds were noted on only 4 days, and never attained the force of a gale. The atmosphere was foggy on the 10th, 11th, 12th, 19th, 22nd, 23rd, 25th, 26th, 27th, 28th, and 29th. Solar halos were observed on the 10th and 12th. There was an aurora borealis on the night of the 22nd.

The rainfall in Dublin during the nine months ending September 30th amounted to 16·121 inches on 146 days, compared with 19·266 inches on 145 days in 1905, 19·147 inches on 152 days in 1904, 25·269 inches on 174 days in 1903, 21·425 inches on 149 days in 1902, 18·070 inches on 124 days in 1901, 24·394 inches on 156 days in 1900, 20·948 inches on 138 days in 1899, only 10·968 inches on 112 days in 1887, and a thirty-five years' average of 19·880 inches on 145 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. Thomas H. Hill, Soh., reports that the mean height of the barometer was 30·201 inches, the range of atmospheric pressure being from 29·488 inches at 9 p.m. of the 14th to 30·601 inches at 9 a.m. of the 27th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 57·1°. The arithmetical mean of the daily maximal and minimal temperatures was 56·9°. The screened thermometers rose to 80·5° on the 2nd, and fell to 39·4° on the 28th. On the same date the grass minimum was 31·4°. On the 2nd the black bulb *in vacuo* rose to 131·8°. Rain fell on 7 days to the amount of ·804 inch, the greatest fall in 24 hours being ·203 inch on the 11th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 169·4 hours, of which 11·6 hours occurred on the 1st. The mean earth temperatures were—at 1 ft., 58·3°; at 4 ft., 58·0°. The one-foot thermometer ranged from 63·6° on the 3rd to 54·0° on the 28th and 29th. The four-feet thermometer ranged from 59·3° on the 4th to 56·0° on the 30th.

Mr. Robert O'Brien Furlong, C.B., reports that the rainfall at Cloneevin, Killiney, Co. Dublin, was only ·34 inch on 6 days, the maximum being ·10 inch on the 11th. The average September rainfall at this station in 21 years (1885-1905) was 2·079 inches on 13·3 days. Absolute drought prevailed from the 16th to the 29th, both inclusive. Up to the 30th, from January 1st, 15·17 inches of rain had fallen on 141 days. In August, 1·91 inches fell at this station on 17 days, the maximal daily fall being ·38 inch on the 3rd, on which day thunder and lightning occurred. The average August rainfall in the 21 years, 1885-1905, was 3·301 inches on 17 days.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was only ·338 inch on 6 days, compared with 1·055 inches on 10 days in 1905, 2·880 inches on 12 days in 1904, 3·950 inches on 20 days in 1903, 3·995 inches on 12 days in 1902, 5·420 inches on 19 days in 1901, and only ·695 inch on but 4 days in 1900. The heaviest fall in 24 hours was ·100 inch on the 30th. At Knockdolian the rainfall since January 1st, 1906, has been 15·793 inches on 105 days, compared with 22·113 inches on 120 days in 1905, 21·457 inches on 141 days in 1904, 27·050 inches on 154 days in 1903, 27·156 inches on 123 days in 1902, 25·105 inches on 119 days in 1901, and 30·021 inches on 140 days in 1900.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at ·62 inch on 8 days, compared with 5·03 inches on 18 days in 1901, 4·09 inches on 19 days in 1902, 4·33 inches on 21 days in 1903, 2·94 inches on 19 days in 1904, and 1·07 inches on 15 days in 1905. The greatest daily fall was ·20 inch on the 2nd. The mean temperature in the shade was 57·6°, compared with 55·3° in September, 1903, 56·2° in 1904, and 54·9° in 1905. The screened thermometers rose to 82° on the 1st, and fell to 39° on the 10th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was ·681 inch on 9 days, the greatest fall in 24 hours being ·19 inch on the 11th. The mean shade temperature was 55·5°, the extremes being—highest, 78° on the 2nd; lowest, 38° on the 27th.

At 21 Lseson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., registered ·607 inch of rain on 7 days, the greatest fall in 24 hours being ·160 inch on the 11th.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 1·593 inches, the heaviest fall in 24 hours being ·64 inch on the 30th (really October 1st).

Mr. Wm. Miller states that in the City of Cork the rainfall was ·84 inch on 8 days, or 1·86 inches below the average for September. The rainfall was greatest on the 30th, when 0·41 inch was measured. In the 9 months ended September 30th, the rainfall was 20·80 inches, or 5·59 inches less than the average.

Miss Muriel E. O'Sullivan reports that at Whitecross, Stillorgan, Co. Dublin, only ·500 inch of rain fell on 7 days, of which small amount ·100 inch was measured on the 15th.

Printed image digitised by the University of Southampton Library Digitisation Unit

The rainfall recorded at the Ordnance Survey Office, Phœnix Park, was ·735 inch on 7 days, the greatest measurement in 24 hours being ·190 inch on the 11th. The total amount of sunshine at this station was 182·7 hours, the most registered on any one day being 12·7 hours on the 1st.

Dr. T. H. Peyton reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall for July was 1·044 inches on 13 days, the heaviest falls in 24 hours being ·291 inch on the 1st, and ·270 inch on the 31st. The screened thermometers rose to 78·0° on the 22nd, having fallen to 44·0° on the 4th. The mean temperature for the month was 57·9°. In August rain fell on 10 days to the total amount of 1·571 inches. The largest daily measurement was ·340 inch on the 7th. The highest temperature in the shade was 77·8° on the 31st, the lowest night reading in the screen was 48·8° on the 24th. The mean temperature was 60·8°. In September the rainfall was ·869 inch on 9 days, the maximal daily fall was ·146 inch on the 30th. The thermometer in the shade rose to 78·0° on the 1st and 2nd, and fell to 43·5° on the 16th. The mean 9 a.m. dry-bulb temperature of the month was 60·6°. The mean temperature was 58.0°. Up to September 30th the rainfall of 1906 amounted to 17·691 inches on 132 days.

Dr. J. Byrne Power, F.R. Met Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 57·0° being 0·3° above the average for September during 19 previous years (1873-83 and 1898-1905), the extremes being—highest, 75° on the 1st; lowest, 40·5°, on the 26th. At Bournemouth the mean was 59·7°, the extremes being—highest, 78°, on the 4th and 5th; lowest, 43°, on the 27th. The mean daily range was 13·6°, at Bournemouth it was 16·9°. The average relative humidity was 75 per cent., being 2 per cent. below the average for the month during the previous 5 years The rainfall was 0·4 inch on 6 days, being 1·96 inches below the average for September during 16 previous years (1873-83 and 1901-1905), and the lowest precipitation for any month during these 16 years, with the exception of that for October, 1904, which was only 0·19 inch At Bournemouth the rainfall was 0·85 inch on 4 days. The total duration of bright sunshine was 190·4 hours, being 77·2 hours above the average for September during the previous 5 years, compared with 172·7 hours at Phœnix Park, 198·6 hours at Southport, and 231·8 hours at Bournemouth.

October.—True to its wonted character, October of this year was a rainy month—the total fall being 3·318 inches on 22 "rain days." About half an inch was recorded on the 4th (·455 inch), 11th (·498 inch), and 20th (·499 inch). But the month was mild, the mean temperature being 1·8° in excess of the average, and as much as 4·0° above that of October, 1905, which was a very cold month. In fact, had it not been for sharp cold snaps from the 17th to the 20th and from the 27th to the end, this month had bid fair to establish a record for mildness. Snow fell on the loftier summits of the Dublin and Wicklow mountains on the night of the 30th. Thunder and lightning occurred in England, Wales, and the S.E. of Ireland in connection with a deep barometrical depression during the closing days.

In Dublin the arithmetical mean temperature (51·2°) was very decidedly above the average (49·4°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 50·0°. In the forty-two years ending with 1906, October was coldest in 1892 (M. T.=44·8°) and in 1896 (M. T.=45·0°). It was warmest in 1876 (M. T.=53·1°). The M. T. in 1898 was 52·3°. In 1905 it was 47·2°.

The mean height of the barometer was 29·739 inches, or 0·101 inch below the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·391 inches at 9 a.m. of the 25th, and fell to 29·264 inches at 9 p.m. of the 29th. The observed range of atmospheric pressure was, therefore, 1·127 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 50·0°, or 5·7° below the value for September, 1906. The arithmetical mean of the maximal and minimal readings was 51·2°, compared with a thirty years' average of 49·4°. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·485, the mean temperature was 51·0°, or 1·8° above the average mean temperature for October, calculated in the same way, in thirty years, 1871-1900, inclusive (49·2°). On the 6th the thermometer in the screen rose to 65·1°—wind, S.; on the 20th the temperature fell to 32·9°—wind, calm. The minimum on the grass was 27·9° on the 20th.

The rainfall was 3·318 inches, distributed over 22 days; both the rainfall and the rainy days were above the average. The average rainfall for October in the thirty-five years, 1866-1900, inclusive, was 2·940 inches, and the average number of rainy days was 18. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1904 only ·454 inch fell on 11 days, in 1890 only ·639 inch fell on but 11 days; in 1884, only ·834 inch on but 14 days; and in 1868 only ·856 inch on 15 days. In 1905 the rainfall was 1·196 inches on 16 days.

High winds were noted on 11 days, but attained the force of a gale on only one occasion—the 26th. The atmosphere was more or less foggy in Dublin on the 3rd, 11th, 19th, 20th, 25th, 30th and 31st. The duration of bright sunshine was estimated at 124 hours, compared with 127·25 hours in 1900, 115·25 hours in 1901, only 84·25 hours in 1902, 132·75 hours in 1903, 93·25 hours in 1904, and 110·75 hours in 1905. Lunar halos were seen on the 25th and 31st, there was a solar halo on the 21st. Lightning occurred on the evenings of the 28th and 30th.

The rainfall in Dublin during the ten months ending October 31st amounted to 19·439 inches on 168 days, compared with 12·368 inches on 123 days during the same period in 1887 (the dry year), 20·466 inches on 145 days in 1901, 24·481 inches on 172 days in 1902, 27·882 inches on 196 days in 1903, 19·601 inches on 163 days in 1904, 20·462 inches on 161 days in 1905, and a thirty-five years' average of 22·820 inches on 163 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. Thomas H. Hill, Sch., reports that the mean height of the barometer was 29·739 inches, the range of atmospheric pressure being from 30·390 inches at 9 a.m. of the 25th to 29·268 inches at 9 p.m. of the 29th. The mean

Printed image digitised by the University of Southampton Library Digitisation Unit

value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 50·8°. The arithmetical mean of the daily maximal and minimal temperatures was 51·2°. The screened thermometers rose to 65·1° on the 6th, and fell to 32·0° on the 30th. On this latter date the grass minimum was 28·3°, but it was 23·3° on the 20th, and ground frost was felt on 7 nights. On the 7th the black bulb *in vacuo* rose to 115·7°. Rain fell on 20 days to the amount of 3·183 inches, the greatest fall in 24 hours being ·511 inch on the 11th. The duration of bright sunshine according to the Campbell-Stokes recorder was 99·7 hours, of which 7·4 hours occurred on the 18th. The mean daily sunshine was 3·2 hours. The mean temperature of the soil at 9 a.m., at a depth of 1 foot, was 51·7°; at a depth of 4 feet it was 54·0°. The subsoil temperature at 1 foot decreased from 55·5° on the 5th to 45·2° on the 31st. At 4 feet it decreased from 56·0° on the 1st to 51·5° on the 31st.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'B. Furlong, C.B., returns the rainfall in October at 3·43 inches on 24 days, compared with 2·760 inches on 20 days in 1902, 3·820 inches on 26 days in 1903, only ·290 inch on 12 days in 1904, 1·01 inches on 14 days in 1905, and a twenty-one years' average (1885-1905) of 2·904 inches on 16·4 days. On the 4th ·80 inch fell. Since January 1st, 1906, 18·60 inches of rain have fallen at this station on 165 days.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 2·849 inches on 20 days, the greatest fall in 24 hours being ·462 inch on the 4th. The mean shade temperature was 47·9°, the extremes being—highest, 63·0° on the 7th; lowest, 28° on the 19th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 24 days to the amount of 4·52 inches, compared with 2·40 inches on 21 days in 1901, 3·45 inches on 24 days in 1902, 3·38 inches on 26 days in 1903, ·42 inch on 9 days in 1904, and 1·54 inches on 15 days in 1905. The greatest measurement in 24 hours was ·75 inch on the 20th. The mean temperature in the shade was 50·7°, the range being from 63° on the 6th to 33° on the 20th. The mean temperature of October was 50·0° in 1901, 50·9° in 1902, 50·8° in 1903, 51·6° in 1904, and 47·1° in 1905.

Dr. Christopher Joynt, F.R.C.P.I., registered 3·395 inches of rain on 21 days at 21 Leeson Park, Dublin, the largest measurement in 24 hours being ·570 inch on the 20th.

Miss Muriel E. O'Sullivan recorded a rainfall of 4·035 inches on 22 days at White Cross, Stillorgan, Co. Dublin. The heaviest fall in 24 hours was ·810 inch on the 20th. On the 4th ·550 inch fell, and on the 11th ·540 inch.

Mr. R. Cathcart Dobbs, J.P., reports that the rainfall in October, at Knockdolian, Greystones, Co. Wicklow, amounted to 5·205 inches on 23 days. Of this quantity, ·870 inch fell on the 4th. From January 1st, 1906, up to October 31st, rain fell at Knockdolian on 128 days to the total amount of 20·998 inches. In 1901 the rainfall in the corresponding ten months was 28·030 inches on 135 days; in 1902, 31·311 inches on 140 days; in 1903, 30·965 inches on 181 days; in 1904, 22·037 inches on 151 days; and in 1905, 22·754 inches on 131 days.

Mr. William Miller states that in the City of Cork there were 26 days with rain during the month—total fall, 4·14 inches, which was 0·84 inch over the average. The greatest day's rain was that of the 25th—0·51 inch. The rainfall of the past ten months was 24·94 inches, which was 4·75 inches short of the average for the same period.

At the Ordnance Survey Office, Phœnix Park, Dublin, the October rainfall was 2·551 inches on 20 days, compared with 1·365 inches on 17 days in 1905, ·650 inch on 10 days in 1904, and 2·339 inches on 24 days in 1903. The heaviest fall in 24 hours was ·580 inch on the 11th. At the Royal Botanic Gardens, Glasnevin, rain fell on 22 days to the amount of 3·170 inches, the greatest daily fall being ·61 inch on the 4th.

The Rev. Arthur Wilson, M.A., recorded a rainfall of 6·61 inches on 27 days at the Rectory, Dunmanway, Co. Cork. It was fairly fine from the 9th to the 19th and on the 30th and 31st. The rest of the month was generally wet, but mild. The heaviest falls in 24 hours were ·76 inch on the 20th, ·69 inch on the 21st, and ·68 inch on the 27th. The rainfall for 10 months of 1906 is 43·29 inches, compared with 43·18 inches in 1905.

Dr. T. H. Peyton, Resident Medical Superintendent, reports that the rainfall in October at the Royal National Hospital for Consumption for Ireland at Newcastle, Co. Wicklow, amounted to 5·755 inches on 20 days. The heaviest falls in 24 hours were ·860 inch on the 26th and ·710 inch on the 20th. The total rainfall for 1906 up to October 31st was 23·446 inches. The mean dry-bulb temperature for October was 54·6°. The maximal shade temperature was 63·5° on the 7th. On the 29th the minimum was 30·0°.

Dr. J. Byrne Power, D.P.H., F.R., Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 51·7°, being equal to the average for October during 19 previous years (1873-83 and 1898-1905); the extremes were—highest, 64·5° on the 7th; lowest, 32·5° on the 20th. At Bournemouth the mean was 53·8°, the extremes being—highest, 68° on the 3rd; lowest, 35° on the 18th. The mean daily range of temperature at Kingstown was 10·5°, at Bournemouth it was 11·4°. The mean temperature of the sea at Sandycove bathing-place was 51·1°, being equal to the average for the month during the previous 8 years. The mean relative humidity was 80 per cent., or 1 per cent. above the average for the month during the previous 5 years. The rainfall amounted to 3·34 inches on 22 days, being 0·78 inch above the average for the month during 16 previous years (1873-83 and 1901-1905), at Bournemouth it was 6·84 inches on 23 days—more than double that of Kingstown. The duration of bright sunshine was 106·3 hours, or 6·2 hours above the average for the month during the previous 5 years, as compared with 109·4 hours at the Ordnance Survey Office, Phœnix Park, 73·5 hours at Southport, and 103·7 hours at Bournemouth.

NOVEMBER.—A dull, damp and showery month, as well as very mild and open. At the beginning, and also from the 17th to the 20th, temperature was rather low. On Sunday, the 18th, the thermometer ranged from 33·9° to 40·9°, the mean being 37·4°, or some 8° below the average.

Printed image digitised by the University of Southampton Library Digitisation Unit

On the 21st a remarkable and sudden increase in temperature occurred, with the setting in of an equatorial air current which held to the close of the month. The 22nd was wonderfully warm—the extreme readings of the thermometers in the screen being—lowest 56·9°, highest 67·9°, and the mean 60·0°. On Saturday, the 24th, the screened thermometer rose to 64·4° at Fitzwilliam Square, Dublin, and to 65·4° in Trinity College, Dublin. In this week ended Saturday, the 10th, calms or easterly and north-easterly winds prevailed, but through the remainder of the month the wind was invariably westerly or south-westerly. A sharp thunderstorm with vivid lightning and heavy hail-showers passed in from St. George's Channel over the counties Dublin and Wicklow on the afternoon of Sunday, the 4th. Snow lay on the Dublin mountains on the 18th and two following days. A splendid double lunar rainbow, with prismatic colouring, was seen from Dublin about 8 p.m. of the 29th. A westerly gale and showers of drifting rain prevailed at the time.

In Dublin the arithmetical mean temperature (47·6°) was 2·2° above the average (45·4°), the mean dry-bulb readings at 9 a.m. and 9 p.m. were 46·7°. In the forty-two years ending with 1906, November was coldest in 1878 (M. T.=38·2°), and in 1870 (M. T.=42·2°); warmest in 1899 (M. T.=50·7°), and in 1881 (M. T.=50·3°). In 1905 the M. T. was 42·7°.

The mean height of the barometer was 29·855 inches, or 0·005 inch below the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·535 inches at 9 a.m. of the 11th, and fell to 29·093 inches at 9 p.m. of the 18th. The observed range of atmospheric pressure was, therefore, 1·442 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 46·7°, or 3·3° below the value for October, 1905. The arithmetical mean of the maximal and minimal readings was 47·6°, compared with a thirty years' (1871-1900) average of 45·4°. On the 24th the thermometer in the screen rose to 64·4°—wind, S.S.W.; on the 20th the temperature fell to 33·0°—wind, W.S.W. The minimum on the grass was 27·8° on the 18th.

The rainfall was 1·562 inches on 17 days—the rainfall was much below, and rainy days were equal to, the average. The average rainfall for November in the thirty-five years, 1866-1900, inclusive, was 2·560 inches, and the average number of rainy days was 17·0. In 1888, 6·459 inches fell on 26 days. On the other hand, the rainfall in 1896 was only ·664 inch on 9 days. In 1905 the rainfall was 3·551 inches on 19 days.

High winds were noted on 13 days, and attained the force of a gale on five days—the 9th, 15th, 17th, 29th and 30th. The atmosphere was more or less foggy in Dublin on the 3rd, 5th, 6th, 24th and 25th. Solar halos were seen on the 20th, 25th and 30th; a lunar halo appeared on the 2nd, and again on the 25th. There were lunar coronas on the 24th, 25th and 28th. Sleet or snow fell on the 18th; hail on the 4th and 5th. A thunderstorm occurred on the afternoon of the 4th. There was a bright-coloured double lunar rainbow on the evening of the 29th.

The rainfall in Dublin during the eleven months ending November 30th amounted to 21·001 inches on 185 days, compared with 15·378 inches on 141 days during the same period in 1887, 24·086 inches on 156 days in 1901, 27·812 inches on 190 days in 1902, 30·015 inches on 212 days in 1903, 20·678 inches on 172 days in 1904, 24·013 inches on 180 days in 1905, and a thirty-five years' average of 25·380 inches on 180 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. Thomas H. Hill, Sch., reports that the mean height of the barometer was 29·855 inches, the ranges of atmospheric pressure being from 30·528 inches at 9 a.m. of the 11th to 29·084 inches at 9 a.m. of the 18th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 47·3°. The arithmetical mean of the daily maximal and minimal temperatures was also 47·3°. The screened thermometers rose to 65·4° on the 24th, and fell to 32·9° on the 20th. On the 18th the grass minimum was 24·6°. On the 22nd the black bulb *in vacuo* rose to 91·9°. Rain fell on 17 days to the amount of 1·386 inches, the greatest fall in 24 hours being ·280 inch on the 7th. The duration of bright sunshine, according to the Campbell-Stokes recorder was 43·8 hours, of which 6·1 hours occurred on the 2nd. The mean daily sunshine was 1·5 hours. The mean temperature of the soil at a depth of one foot was 45·9° at 9 a.m.; at a depth of 4 feet, it was 48·8° at 9 a.m.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'B. Furlong, C.B., states that 1·62 inches of rain fell on 18 days, compared with a twenty-one years' (1885-1905) average of 3·040 inches on 16 days. The maximal fall in 24 hours was ·36 inch on the 4th. Since January 1st, 1906, 20·22 inches of rain have fallen at this station on 183 days. The corresponding figures for 1901 were 26·10 inches on 161 days; 1902, 30·18 inches on 178 days; 1903, 30·05 inches on 203 days; 1904, 20·39 inches on 166 days; and 1905, 25·95 inches on 167 days. Thunder and lightning occurred on the 4th with a heavy hail-storm. There was a strong S.W. gale on the 29th.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 1·630 inches on 12 days. Of the total quantity ·340 inch fell on the 19th. From January 1st, 1906, up to November 30th, rain fell at Greystones on 140 days to the amount of 22·628 inches. The corresponding figures for 1901 were 31·425 inches on 147 days; 1902, 37·101 inches on 157 days; 1903, 33·070 inches on 193 days; 1904, 23·572 inches on 160 days; and 1905, 27·515 inches on 150 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 15 days to the amount of 1·60 inches, the greatest measurement in 24 hours being ·30 inch on the 4th. In November, 1901, the rainfall was 3·53 inches on 8 days; in 1902, it was 4·61 inches on 17 days; in 1903, 1·93 inches on 14 days; in 1904, 1·26 inches on 11 days; and in 1905, 4·35 inches on 22 days. The mean temperature in the shade was 46·8°, the range being from 35° on the 19th and 20th to 63° on the 24th. There was a thunderstorm on the 4th.

At White Cross, Stillorgan, Co. Dublin, Miss Muriel E. O'Sullivan measured 1·375 inches of rain on 14 days. The heaviest rainfall in 24 hours was that which accompanied the thunderstorm of the 4th—namely, ·285 inch. After the 18th only ·115 inch fell on 3 days.

Printed image digitised by the University of Southampton Library Digitisation Unit

Dr. Christopher Joynt, F.R.C.P.I., registered 1·485 inches on 16 days at Leeson Park, Dublin. The maximum in 24 hours was ·253 inch on the 7th. In the thunderstorm of the 4th the record was only ·199 inch. In November, 1905, 3·795 inches of rain had been recorded at this station.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·802 inches on 15 days; the greatest fall in 24 hours being ·285 inch on the 18th. The mean shade temperature was 41·9°, the extremes being—highest, 60·0° on the 22nd; lowest, 28° on the 17th, 19th and 20th.

In the City of Cork Mr. William Miller returns the rainfall at 3·14 inches, or ·92 inch below the average for November. There were 18 rainy days. The heaviest fall in 24 hours was ·80 inch on the 5th. Up to November 30th, the rainfall of 1906 amounted to 27·98 inches, that is 5·77 inches less than the average for eleven months of the year.

At Dunmanway Rectory, Co. Cork, the Rev. Arthur Wilson, M.A., registered a rainfall of 4·07 inches on 20 days, the heaviest falls in 24 hours being ·76 inch on the 20th, ·60 inch on the 6th, ·47 inch on the 3rd, and ·41 inch on the 4th. The rainfall of 1906 to November 30th at this station amounts to 47·36 inches.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 15 days to the amount of 1·900 inches, the largest measurement in 24 hours being ·450 inch on the 7th. The total amount of sunshine was 53·7 hours, the most in one day being 6·8 hours, on the 24th.

Dr. T. H. Peyton, Resident Medical Officer, returns the rainfall in November at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, at 1·680 inches on 18 days. The largest measurements in 24 hours were ·320 inch on the 20th and ·319 inch on the 3rd. Up to November 30th, rain had fallen at this station on 170 days to the amount of 25·096 inches. The mean shade temperature for the month was 46·1° F. The thermometer rose to 59·0° on the 25th, and fell to 31·5° on the 4th.

Dr. J. Byrne Power, D.P.H., F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature of that health resort was 48°, being 1·5° above the average for November during 19 previous years (1873-83 and 1898-1905). The extremes were—highest, 64° on the 25th; lowest, 33° on the 18th. The high temperatures between the 21st and 25th were very remarkable—viz., 61° on the 21st, 62° on the 22nd, 60° on the 23rd, 62° on the 24th, and 64° on the 25th. At Bournemouth the mean was 46°, the extremes being—highest, 60° on the 22nd; lowest, 30° on the 13th and 14th. The mean daily range was 9·4°, at Bournemouth it was 10·1°. The average relative humidity was 79 per cent., being 1 per cent. below the average for the month during the previous 5 years. The mean temperature of the sea at Sandycove Point was 47·7°, being 1·9° above the average for the month during the previous 8 years. The rainfall amounted to 1·45 inches on 14 days, being 1·23 inches below the average for November during 16 previous years (1873-83 and 1901-05). At Bournemouth the rainfall was 3·86 inches on 20 days. The total duration of bright sunshine was 68·3 hours, being 14·6 hours above the average for the month during the previous 5 years. The greatest duration for any one day was 8·2 hours on the 2nd. The total duration at Southport was 43·2 hours, and at Bournemouth 63·3 hours.

DECEMBER.—This was a month of average but singularly unsteady temperature, with frequent but not heavy precipitation, and an overwhelming prevalence of winds from westerly points. The most interesting features were—(1) the high temperature which at first accompanied an anticyclone of great intensity and unusual staying power in the third week; (2) the rigorous frost which developed over Central Europe as this anticyclone spread westward to the British Isles; and (3) the extraordinary snowstorm which raged on Christmas Night and during the following days all over North-Western Europe. The frost which followed this snow-storm was very severe, if fleeting—at Birr Castle the screened thermometer sank to 11° on the early morning of Saturday, the 29th; at Aberdeen, the maximum on the 30th was 20°, and at Nairn a minimum of 9° was recorded in the early morning hours of Monday, the 31st.

In Dublin the arithmetical mean temperature (41·6°) was 0·1° below the average (41·7°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 40·9°. In the forty-two years ending with 1906, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. = 36·8°); warmest in 1898 (M. T. = 47·6°), and in 1900 and 1905 (M. T. = 47·1°).

The mean height of the barometer was 29·990 inches, or 0·115 inch above the corrected average value for December—namely 29·875 inches. The mercury rose to 30·584 inches at 9 a.m. of the 21st, and fell to 29·280 inches at 9 a.m. of the 26th. The observed range of atmospheric pressure was, therefore, 1·304 inches

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 40·9°, or 5·8° below the value for November, 1906. Using the formula *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × 52, the value was 41·8° or 0·1° below the average mean temperature for December, calculated in the same way, in the thirty years, 1871-1900, inclusive (41·9°). The arithmetical mean of the maximal and minimal readings was 41·6°, compared with a thirty years' average of 41·7°. On the 5th the thermometer in the screen rose to 55·9°—wind, W.; on the 30th the temperature fell to 23·1°—wind, calm. The minimum on the grass was 18·9° on the 30th. There were 6 days of frost in the screen, and 15 nights of frost on the grass were recorded.

The rainfall was 1·806 inches, distributed over 18 days. The average rainfall for December in the thirty-five years, 1866-1900, was 2·390 inches, and the average number of rainy days was 18. The rainfall, therefore, was below, while the rainy days were equal to, the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1868 (which was otherwise a fine and dry year), 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 inch was measured on 13 days; in 1885, only ·742 inch on 10 days; in 1892, only ·795 inch on 10 days; and in 1871, only ·797 inch on 15 days. In 1905, 1·264 inches of rain fell on 13 days.

Pnnted image digitised by the University of Southampton Library Digitisation Unit

High winds were noted on 13 days, and attained the force of a gale on four occasions—the 2nd, 4th, 5th and 12th. The atmosphere was more or less foggy in Dublin on the 7th, 10th, 15th, 18th, 21st, 22nd, 29th and 30th. Hail fell on the 14th, 26th, and 27th; snow or sleet, on the 5th, 12th, 13th, 14th, 26th, 27th, 28th and 30th. A solar halo was seen on the 1st and again on the 29th, and lunar halos appeared on the 27th, 29th, 30th and 31st.

The rainfall in Dublin during 1906 amounted to 22·807 inches on 203 days, compared with 25·277 inches on 193 days in 1905, 2·180 inches on 189 days in 1904, 31·601 inches on 228 days in 1903, 29·375 inches on 203 days in 1902, 26·075 inches on 179 days in 1901, 34·338 inches on 218 days in 1900, only 16·601 inches on 160 days in 1887, and a thirty-five years' average of 27·770 inches on 198 days.

Mr. Thomas H. Hill, Sch., reports that, at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·987 inches, the range of atmospheric pressure being from 30·578 inches at 9 a.m. of the 21st to 29·273 inches at 9 a.m. of the 28th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41·3°. The arithmetical mean of the daily maximal and minimal temperatures was 41·4°. The screened thermometers rose to 55·4° on the 4th, and fell to 21·5° on the 30th. On this latter date the grass minimum was 11·9°. On the 7th the black bulb *in vacuo* rose to 67·7°. Rain fell on 17 days to the amount of 1·778 inches, the greatest fall in 24 hours being ·388 inch on the 15th The duration of bright sunshine, according to the Campbell-Stokes recorder, was 19·9 hours, of which 3·7 hours occurred on the 13th. The mean daily sunshine was 0·8 hour. The mean temperature of the soil at 9 a.m. at a depth of one foot was 42·7°; at a depth of 4 feet it was 46·7°.

Mr. R. Cathcart Dobbs, J.P., reports that, at Knockdolian, Greystones, Co. Wicklow, the rainfall in December was 1·860 inches on 11 days, compared with 1·405 inches on 10 days in 1905, 1·890 inches on 15 days in 1904, 2·830 inches on 18 days in 1903, and 2·920 inches on only 11 days in 1902. Of the total amount ·800 inch fell on the 15th. From January 1st to December 31st, 1906, rain fell at Knockdolian on 151 days, to the total amount of 24·488 inches. The corresponding figures for 1896 were 36·102 inches on 169 days; 1897, 42·885 inches on 210 days; 1898, 30·546 inches on 171 days; 1899, 36·690 inches on 182 days; 1900, 42·716 inches on 191 days; 1901, 34·750 inches on 166 days; 1902, 40·021 inches on 188 days; 1903, 35·900 inches on 211 days, 1904, 25·462 inches on 175 days; and 1905, 28·920 inches on 160 days.

Miss Muriel E. O'Sullivan returns the rainfall at White Cross, Stillorgan, Co. Dublin, at 1·854 inches on 17 days, ·505 inch being measured on the 15th, and ·420 inch on the 11th. The total rainfall for the year was 23·386 inches on 197 days.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 2·087 inches on 15 days. The greatest fall in 24 hours was ·460 inch on the 11th. The mean shade temperature was 37·2° the extremes being—highest, 53° on the 4th; lowest, 18° on the 28th and 29th. The total rainfall for 1906 was 22·788 inches on 190 days.

The Rev. Arthur Wilson, M.A., reports that rain fell on 21 days at the Rectory, Dunmanway, Co. Cork, to the amount of 3·19 inches. The heaviest falls were ·58 inch on the 11th, ·42 inch on the 14th, ·41 inch on the 12th, and ·39 inch on the 25th. The rainfall for the year was 50·55 inches on 228 days. In 1905 it had been 54·72 inches on 211 days.

Dr. Christopher Joynt, F.R.C.P.I., recorded 1·820 inches of rain on 18 days at 21 Leeson Park, Dublin. On the 11th, ·390 inch was recorded, and on the 15th the measurement was ·376 inch. The total rainfall for the year was 23·112 inches on 198 days.

Mr. Robert O'B. Furlong, C.B., returns the rainfall at Cloneevin, Killiney, at 2·12 inches on 18 days. The maximal fall in 24 hours was ·60 inch on the 15th. The average December rainfall of the 21 years (1885-1905) was 2·357 inches on 17 days. Since January 1st, 1906, 22·34 inches of rain have fallen at this station on 201 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 17 days to the amount of 1·79 inches, ·45 inch being measured on the 12th. Temperature ranged from 55·0° on the 4th to 22·0° on the 30th. The mean shade temperature was 41·2° Fahrenheit. In 1903, 2·21 inches of rain fell on 20 days; in 1904, 2·14 inches on 21 days, and in 1905, 1·71 inches on 18 days. The total rainfall in 1906 at Lynton was 25·61 inches on 205 days.

At Cork, according to Mr. W. Miller, the December rainfall was 1·75 inches on 19 days, the measurement being 2·70 inches less than the average. The greatest daily rainfall was ·30 inch on the 10th, and again on the 15th. The year's rainfall at this station was 29·83 inches on 192 days, the total being 8·37 inches under the average, and the rainy days being 5 in defect.

The rainfall at the Ordnance Survey Office, Phœnix Park, Dublin, was 2·097 inches on 19 days, the maximum in 24 hours being ·465 inch on the 15th. The total amount of sunshine was 39·9 hours, the largest daily amount was 5·5 hours on the 7th. The thermometer fell to 15·0° in the screen on the night of the 30th.

Dr. J. Byrne Power, D.P.H., F.R. Met Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 42·1°, being 1·1° below the average for December during 19 previous years (1873-83 and 1898-1905); the extremes were—highest, 56°, on the 17th and 18th; lowest, 22°, on the 30th. A sharp frost prevailed during the 5 last days of the month, the mean temperature for that period being 32·7°, an extraordinarily low mean for Kingstown. The mean for the month at Bournemouth was 38·9°, the extremes being—highest, 58° on the 16th; lowest, 24° on the 31st; the thermometer registering below 32° on 10 days, whereas at Kingstown it fell below 32° on only the 5 days mentioned. The mean range of temperature was 8·3° at Kingstown, at Bournemouth it was 10·6°. The mean temperature of the sea at Sandycove bathing-place was 44°, being 2·1° below the average during the

Printed image digitised by the University of Southampton Library Digitisation Unit

previous 8 years. The average relative humidity was 90 per cent., being 5 per cent. below the average for the month during the previous 5 years. The rainfall was 1·70 inches on 17 days, being 0·5 inch below the average during 16 previous years (1873-83 and 1901-05). The annual rainfall for 1906 was 20·84 inches on 190 days, being 7·05 inches below the average for the above 16 previous years, and the absolute lowest for any of those years excepting that for 1904, which was only 20·01 inches. The total duration of bright sunshine was 50·9 hours, being 4·1 hours above the average for the month during the previous 5 years, as compared with 41·9 hours at Southport, and 76 hours at Bournemouth.

* Maximum

The rainfall was 22·807 inches, or 4·963 inches less than the average annual measurement of the thirty-five years, 1866-1900, inclusive—viz., 27·770 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches—the only approach to this measurement in Dublin being in 1870, when only 20·859 inches fell; in 1884, when the measurement was 20·467 inches; and in 1883, with its rainfall of 20·493 inches. In ten of the thirty-five years in question the rainfall was less than 26 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. In 1900 the rainfall was 34·338 inches, or 6·568 inches in excess of the average for the thirty-five years, 1866-1900. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1900—namely, in 1872, when 35·566 inches fell on 238 days, and in 1880, when 34·512 inches were measured on, however, only 188 days. In 1905 the rainfall was 25·277 inches on 193 days.

In 1906 there were 203 "rain-days" or days upon which not less than ·005 inch of rain (five-thousandths of an inch) was measured. This was 5 over the average number of rain-days, which was 198 in the thirty-five years, 1866-1900, inclusive. In 1868 and 1887—the warm, dry years of recent times—the rain-days were only 160, and in 1870 they were only 145.

In 1905 the rainfall in 24 hours, from 9 a.m. to 9 a.m., on only one occasion exceeded one inch—namely, on August 25th, but it then amounted to 3·436 inches, the greatest daily fall registered in Dublin since these records began. On no occasion in 1906 did one inch of rain fall on a given day in Dublin. In 1894 falls of upwards of an inch of rain in 24 hours were recorded on 4 occasions—viz., May 15th (1·330 inches); July 24th (1·560 inches); August 25th (1·369 inches); and October 23rd (1·042 inches). In 1895, 1·802 inches fell on January 12th; 1·014 inches on July 24th; and 1·256 inches on July 25th. In 1896, 1·563 inches fell on July 8th; 2·020 inches on July 24th; and 1·388 inches on December 8th. In 1897, 1·166 inches fell on September 1st. In 1898, on November 23rd, 1·732 inches were measured. In 1899, the rainfall exceeded one inch on 4 occasions—viz., July 11th (1·402 inches); August 5th (2·227 inches); September 30th (1·042 inches); and December 28th (1·129 inches). In 1900, as in 1899, the rainfall exceeded one inch on 4 occasions—namely, July 27th (1·783 inches); August 2nd (2·135 inches); November 6th (1·103 inches); and November 27th (1·126 inches). In 1901, the rainfall only once exceeded one inch, but on that occasion (November 11th) the measurement was 2·037 inches. In 1902, 1·342 inches fell on July 25th, and 2·075 inches on September 2nd. In 1903 the maximal daily rainfall was ·966 inch on September 10th. In 1904, 1·092 inches fell on May 31st, and 1·197 inches on September 12th. The excessive rainfall on August 25th, 1905, is especially noteworthy—it amounted to 3·436 inches in Dublin (Fitzwilliam Square). It was the ninth occasion only since 1865—that is, in 41 years—upon which 2 inches have been measured in Dublin at 9 a.m. as the product of the preceding 24 hours' precipitation. The previous excessive falls were—August 13th, 1874 (2·482 inches), October 27th, 1880 (2·736 inches); May 28th, 1892 (2·056 inches); July 24th, 1896 (2·020 inches); August 5th, 1899 (2·227 inches), August 2nd, 1900 (2·135 inches); November 11th, 1901 (2·037 inches), and September 2nd, 1902 (2·075 inches). On no previous occasion within the past 40 years had 3 inches or upwards been measured.

Printed image digitised by the University of Southampton Library Digitisation Unit

Included in the 203 rainy days in 1906 are 24 on which snow or sleet fell, and 31 on which there was hail. In January hail was observed on 3 days, in February on 5 days, in March on 6 days, in April on 9 days, in May and in November on 2 days, in August on one day, and in December on 3 days. Snow or sleet fell on 3 days in January, 5 days in February, 6 days in March, one day in April and in November, and 8 days in December. Thunderstorms occurred twice in August and once in November (4th). Lightning was seen once in June and July, and twice in January and October.

The rainfall in the first six months was 12·641 inches on 109 days. The rainfall exceeded 4 inches in January (4·127), and was 3·318 inches in October.

The rainfall was distributed quarterly as follows:—7·291 inches fell on 59 days in the first quarter, 5·350 inches on 50 days in the second, 3·480 inches on 37 days in the third, 6·686 inches on 57 days in the fourth and last quarter.

More or less fog prevailed on 51 occasions—3 in January, 5 in February, 3 in March, 5 in April, 1 in May, 3 in August, 11 in September, 7 in October, 5 in November, and 8 in December. High winds were noted on 118 days—15 in January, 12 in February, 13 in March, 7 in April, 6 in May, 4 in June, 9 in July, 11 in August, 4 in September, 11 in October, 13 in November, and 13 in December. The high winds amounted to gales (force 7 or upwards, according to the Beaufort scale) on 30 occasions—7 in January, 4 in February, 3 in March, 2 in May, 1 in June, 2 in July, 1 in August, 1 in October, 5 in November, and 4 in December.

Solar halos were seen on 27 occasions, a lunar halo on 12 nights. Aurora borealis was seen on the evenings of September 22nd and December 16th.

Mr. Robert O'Brien Furlong, M.A., C.B., writes relative to the rainfall at Cloneevin, Killiney:—The total number of inches measured in 1906 was 22·34 inches on 201 days. This is one of the lowest yearly rainfalls recorded here. The lowest was in 1887 when 17·64 inches were measured. In 1890 the amount was 19·93 inches, and in 1893, 18·05 inches.

The rainfall of 1906 is 5·66 inches below the average of 21 years (1885-1905)—viz., 28·009 inches.

The number of days on which ·01 inch or upwards fell—viz., 201—is 16·6 in excess of the average for the same period—viz., 184·4 days. The number of rainy days has been exceeded in only 3 years—viz., 1897 = 204 days; 1900 = 205; and 1903 = 219.

The greatest amount measured in any month during 1906 was 4·08 inches on 22 days in January—the smallest ·34 inch on 6 days in September.

The greatest number of days on which rain fell in any month was 24 in October—the lowest was 6 in September.

The heaviest fall in 24 hours was on January 2nd, when ·88 inch fell.

Snow, sleet or hail was observed on 23 days.

There was an absolute drought from September 16th to 29th, both included.

*The Hours of Observation are 9 a.m. and 9 p.m.

† The Averages used are based on observations as follows:—Rainfall 50 years, 1871-1920. Temperature 20 years, 1861-1905. Sunshine 25 years, 1881-1905. *Wind Force*—Scanlon Scale (0-12) is used. The number of decretin um of Moderate and Strong winds (force 5-7), the number of observations of Calm and the number of days of Gale are given in the table.

‡ The Sunshine Values are obtained at the Monntjoy Observatory in the Phœnix Park, and the Earth Temperatures at Trinity College.

Note.—The mean pressure shown in the above Table have been corrected for instrumental error and reduced to Mean Sea-level, but not reduced to mean sea level. If it be desired for any purpose to reduce them to the normal the approximate correction for the purpose (varying with the slight limits with the pressure and the temperature) is + ·065.

NOTE.—The temperatures given above were deduced from the maximal and minimal readings of the thermometer. For the years 1885 to 1889, inclusive, Kaemtz's Formula was used, viz.:—Mean Temperature = Min. + (Max.—Min.) ·41; for subsequent years the Formula used was the following:—Mean Temperature = Min. + (Max.—Min.) O, the co-efficient O varying from month to month.

ABSTRACT OF METEOROLOGICAL DATA FOR IRELAND.

Prepared in the Meteorological Office under the direction of W. N. Shaw, Sc.D., F.R.S.

In compiling the following Table (pp. 172–5) the stations have been grouped into two Districts, namely 1, Ireland, North; 2. Ireland, South. Each District is represented by six stations.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are provided for in the Table. The wind observations at Valencia are based on the records of a standard Robinson anemometer (factor 2·2). Velocities between 13 and 38 miles in the hour have been entered in the Tables as strong winds, velocities of 39 miles in the hour, or above, as gales. At the remaining stations the wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking these results.

The stations selected, with the names of the Observers are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.
IRELAND, NORTH:—	
Malin Head,	Meteorological Office.

* The Hours of Observation are 9 a.m. and 9 p.m., local time, at all the Stations except Malin Head, Donaghadee, Blacksod Point, and Roche's Point, a.m., and where also Greenwich time is kept. The results under Barometer, Hygrometer, and Cloud for Malin Head, Donaghadee, Blacksod Point, and mean for the Quarters and for the Year.

† The Averages used are based on observations as follows:—Rainfall 35 years 1871-1905; Temperature 35 years, 1871-1905; Sunshine 25 years, 1881-1905.

‡ The Sunshine Values for Dublin are obtained at the Mountjoy Observatory in the Phœnix Park, and the Eagle

Printed and digitised by the University of Southampton Library Digitisation Unit

during each Quarter of the Year 1906, compiled from Tables prepared under the direction of the Meteorological Council, of the Registrar-General for Ireland

* The Hours of Observation are 9 a.m. and 9 p.m., local time, at all the Stations except Malin Head, Donaghadee, Blacksod Point, and Roche's Point, a.m., and where also Greenwich time is kept. The results under Barometer, Hygrometer, and Cloud for Malin Head, Donaghadee, Blacksod Point, and mean for the Quarters and for the Year

† The Averages used are based on observations as follows:—Rainfall 35 years, 1871-1905, Temperature 35 years, 1871-1905, Sunshine 25 years, 1881-1905 Calm, and the number of days of Gale are given in the table

‡ The Sunshine Values for Dublin are obtained at the Mountjoy Observatory in the Phœnix Park, and the Earth Temperatures at Trinity College.
